Reproducing or quoting any part of this publication is permitted, provided this publication is accredited as the source. Please refer to the Statistics Singapore Website Terms of Use (<http://www.singstat.gov.sg/terms-of-use>) for more details on the conditions of use of this publication.

Statistical activities conducted by the Singapore Department of Statistics are governed by the provisions of the Statistics Act (Cap. 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Chief Statistician. The Act is available in the Department's Website (www.singstat.gov.sg).

PREFACE

Population size, structure and changes have important implications for production, investment and consumption activities as well as community development, social networks and kinship ties. A good understanding of demographic forces and emerging trends is useful for policy makers, planners, businesses and the academia.

The Singapore Department of Statistics compiles, monitors and analyses Singapore's population statistics and indicators in detail. A report on ***Population Trends*** that puts together different aspects of demographic statistics is released annually. ***Population Trends, 2017*** is the thirteenth edition of the annual series.

The report comprises five chapters, namely, 'Population', 'Households and Housing', 'Family Formation and Dissolution', 'Fertility' and 'Mortality'. Key definitions and concepts are explained in text boxes in each chapter. Time series of commonly used indicators are included in the Statistical Appendices. Users can also explore the data time series in our e-service SingStat Table Builder at <http://www.singstat.gov.sg/tablebuilder>.

I would like to thank various government agencies for providing the necessary data for the compilation of indicators released in this report. My sincere appreciation is also extended to all others who have contributed to the successful completion of this report.

Wong Wee Kim
Chief Statistician
Singapore

September 2017

Our Vision

A National Statistical System of Quality, Integrity and Expertise.

Our Mission

We Provide Reliable, Relevant and Timely Statistics to Support Singapore's Social and Economic Development.

Our Guiding Principles

Professionalism & Expertise	<i>We adhere to professional ethics and proficiently produce quality statistics that comply with international concepts and best practices.</i>
Relevance	<i>We constantly innovate our processes and produce statistics that meet users' needs.</i>
Accessibility	<i>We make our statistics readily available.</i>
Confidentiality	<i>We protect the confidentiality of information provided to us.</i>
Timeliness & Reliability	<i>We produce statistics that users can depend on and disseminate them at the earliest possible date while maintaining data quality.</i>
Cost Effectiveness	<i>We use resources effectively, minimising respondent burden and leveraging on administrative data.</i>

* Data refer to Post-Secondary (Non-Tertiary) and Diploma & Professional Qualification.

Notes:

- 1) Total population comprises Singapore residents (i.e. Singapore citizens and permanent residents) and non-residents.
- 2) Data for 1970 and 1980 are based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period). Data from 1990 onwards are based on *de jure* concept (i.e. the person's place of usual residence).
- 3) Data from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.
- 4) Prior to 2003, data are based on Singapore's land area as at end-December. From 2003 onwards, data are based on Singapore's land area as at end-June.
- 5) Data refer to resident population.
- 6) Data refer to resident population, except for 1970 which refer to total population.
- 7) Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.
- 8) Data refer to resident households (i.e. households headed by a Singapore citizen or permanent resident), except for 1970 which refer to private households.
- 9) Data include other types of dwelling (e.g. non-HDB shophouses).
- 10) Data include non-privatised Housing and Urban Development Corporation (HUDC) flats.

Females	67.8	74.7	77.6	80.0	84.0	85.1	85.1 ^p

Notes (cont'd):

- 11) Data for 2017 are not available.
- 12) Total marriages comprise civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. Data exclude civil marriages which were contracted overseas or under religious and customary rites, and were subsequently registered in Singapore in the reference year.
- 13) Data are based on resident grooms/brides and resident population, except for 1970 and 1980 which are based on total grooms/brides and total population.
- 14) Data are based on divorces and annulments. From 2004 onwards, data are based on divorces and annulments where the male/female spouses are residents (i.e. Singapore citizens and permanent residents).
- 15) The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

Population Trends

Chapter 1 Population

Population Size and Growth

The Singapore citizen population grew by 0.9 per cent from previous year to reach 3.44 million as at end-June 2017 (Table 1.1). Together with the permanent resident population, which remained at a stable size of 0.53 million, Singapore's resident population rose 0.8 per cent to 3.97 million.

In contrast, the non-resident population decreased by 1.6 per cent to 1.65 million. Overall, Singapore's total population grew at a slower pace (0.1 per cent, compared to 1.3 per cent the previous year) to reach 5.61 million as at end-June 2017.

Table 1.1 Singapore Population Size and Growth by Residential Status

Year	Number ('000)					Average Annual Growth ¹ (%)				
	Total Population	Singapore Residents			Non-Residents	Total Population	Singapore Residents			Non-Residents
		Total	Citizens	PRs			Total	Citizens	PRs	
1990	3,047.1	2,735.9	2,623.7	112.1	311.3	2.3 ²	1.7 ²	1.7 ²	2.3 ²	9.0
2000	4,027.9	3,273.4	2,985.9	287.5	754.5	2.8	1.8	1.3	9.9	9.3

2017	5,612.3	3,965.8	3,439.2	526.6	1,646.5	0.1	0.8	0.9	0.4	-1.6

Notes: (a) '-' denotes nil or negligible.

(b) Data from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.

¹ For 1990 and 2000, growth rate refers to the annualised change over the last ten years. From 2010 onwards, growth rate refers to the change over the previous year.

² Growth rate is computed using population estimates based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period).

Population

Total population comprises Singapore residents and non-residents. Resident population comprises Singapore citizens and permanent residents. Non-resident population comprises foreigners who are working, studying or living in Singapore but not granted permanent residence, excluding tourists and short-term visitors.

Singapore's population estimates are compiled using the register-based approach since the *Census of Population 2000*. The basic count and profile of the population are based on a person's place of usual residence i.e. *de jure* concept.

Age Structure

Reflecting the ageing population, the median age of the resident population continued to rise, from 40.0 years as at end-June 2016 to 40.5 years as at end-June 2017 (Chart 1.1). Residents aged 65 years and over made up 13.0 per cent of the resident population in 2017, compared to 12.4 per cent in 2016.

Chart 1.1 Age Distribution of Resident Population

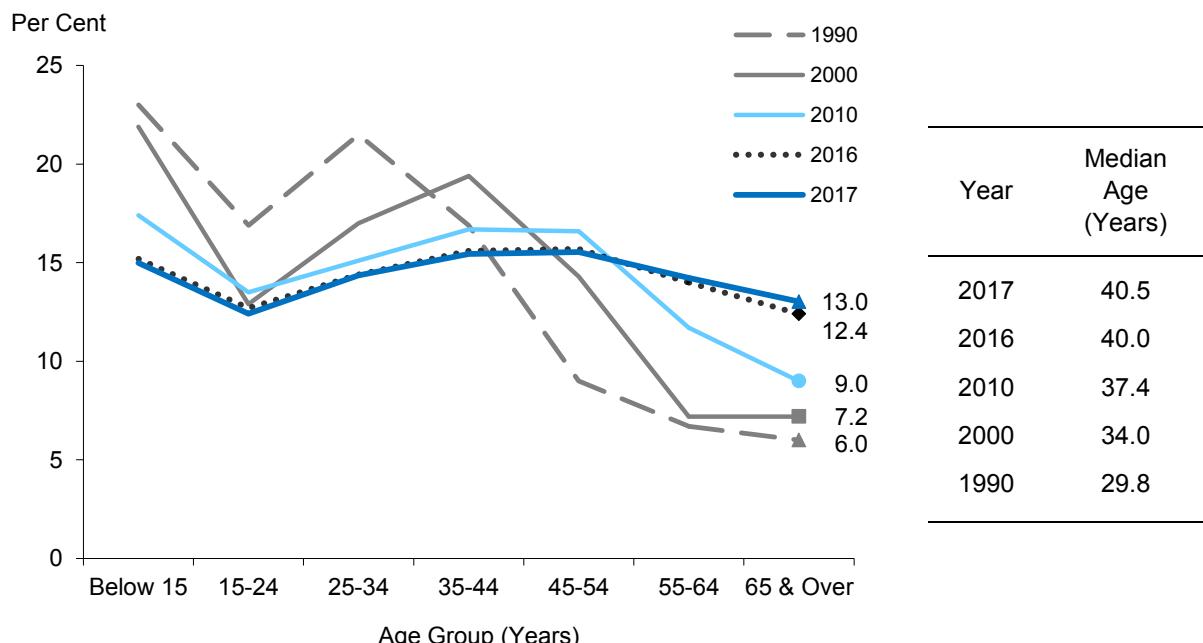

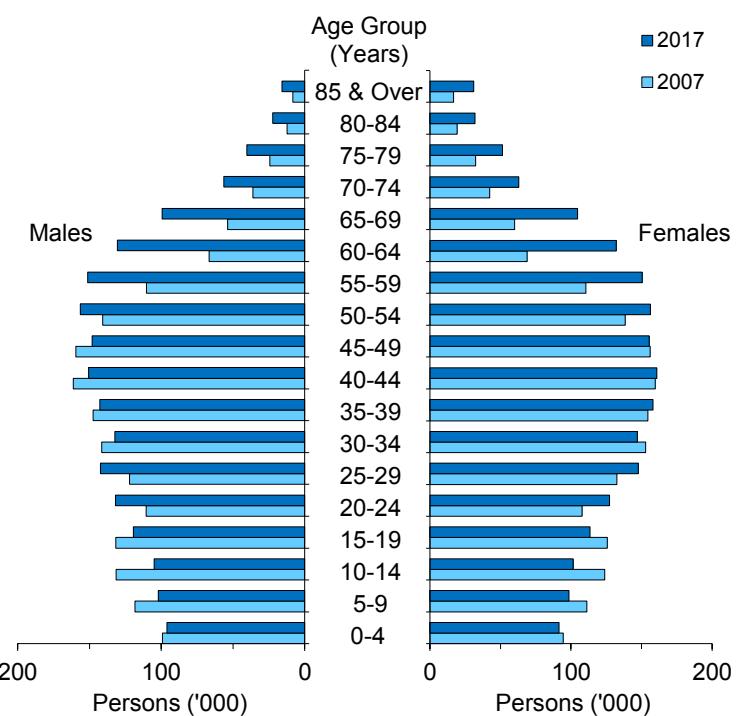

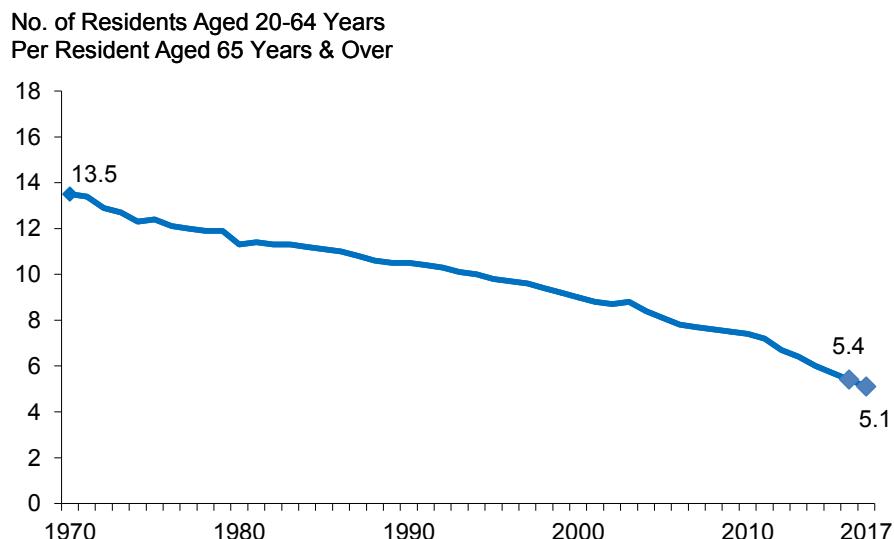

Chart 1.2 Age Pyramid of Resident Population

Old-Age Support Ratio

The old-age support ratio of residents continued to decline. As at end-June 2017, there were 5.1 residents aged 20-64 years for each resident aged 65 years and over, down from the ratio of 5.4 in 2016 (Chart 1.3).

Chart 1.3 Resident Old-Age Support Ratio

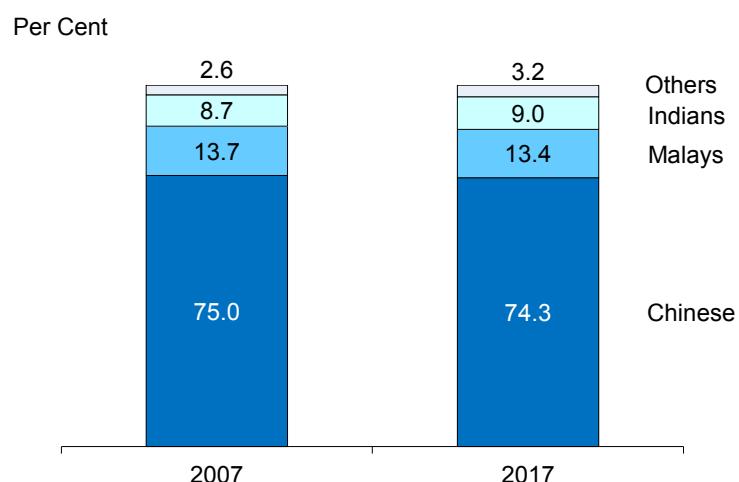

Note: For 1971-1979, data refer to total population.

Ethnic Composition

The majority of the residents were Chinese, at 74.3 per cent as at end-June 2017 (Chart 1.4). Next were the Malays at 13.4 per cent, and Indians at 9.0 per cent.

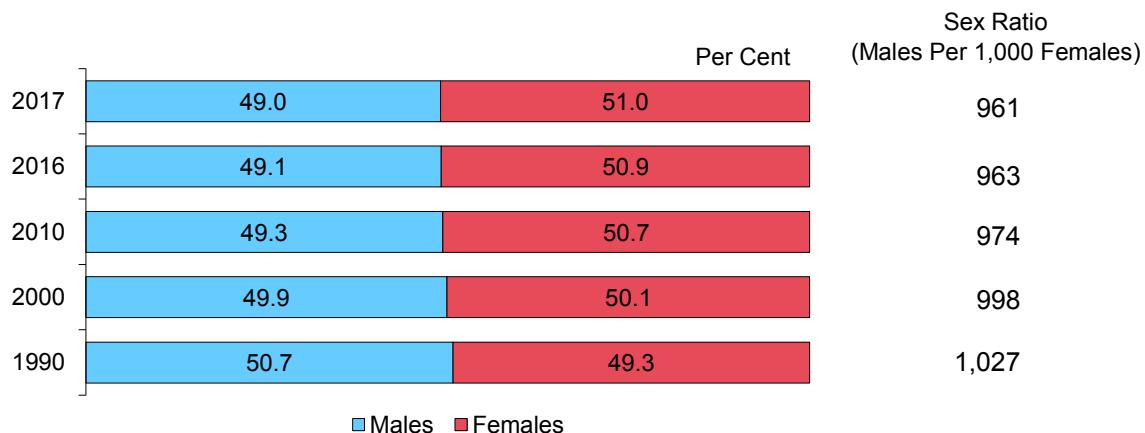

Chart 1.4 Ethnic Composition of Resident Population

Sex Composition

The females continued to outnumber the males. The sex ratio among residents was 961 males per 1,000 females as at end-June 2017 (Chart 1.5).

Chart 1.5 Sex Composition of Resident Population

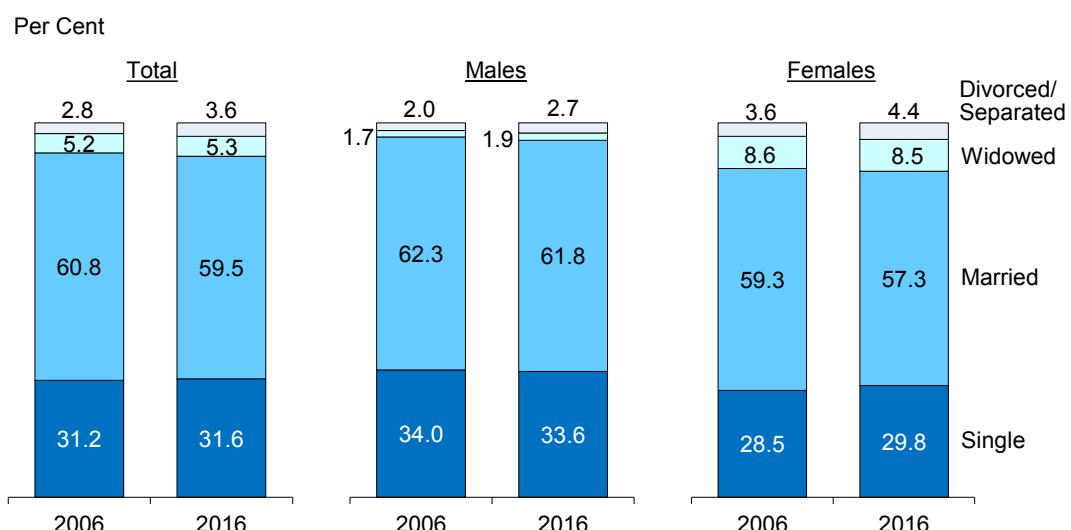

Marital Status

Among the resident population aged 15 years and over, 59.5 per cent were married, slightly lower than in 2006 (60.8 per cent) (Chart 1.6). The proportion of singles remained stable at 31.6 per cent in 2016 compared to 31.2 per cent in 2006. In 2016, divorced or separated persons and widowed persons remained a small proportion of the resident population, at 3.6 per cent and 5.3 per cent respectively.

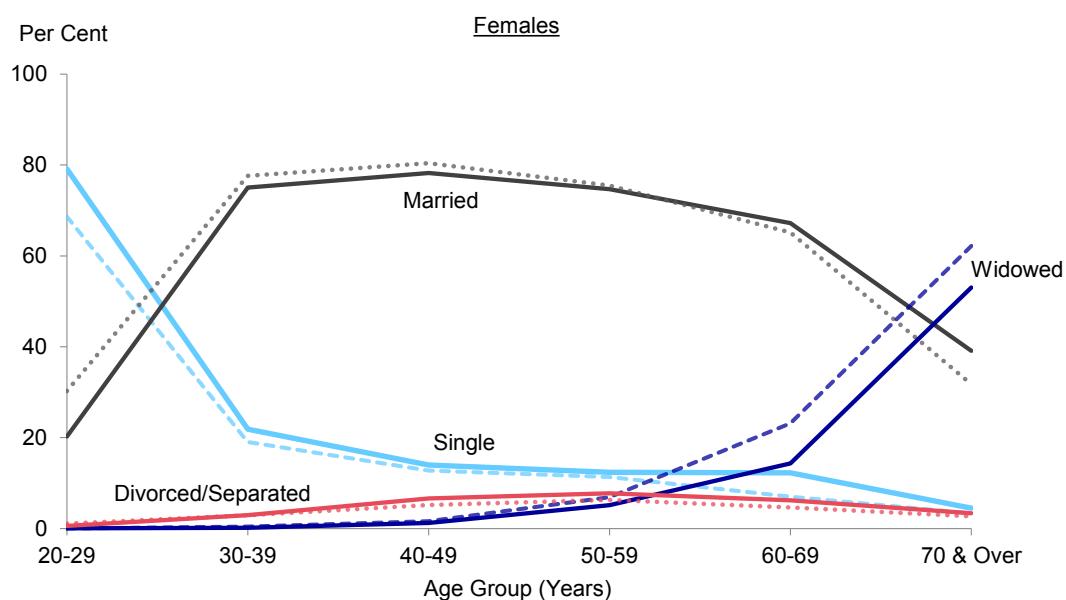

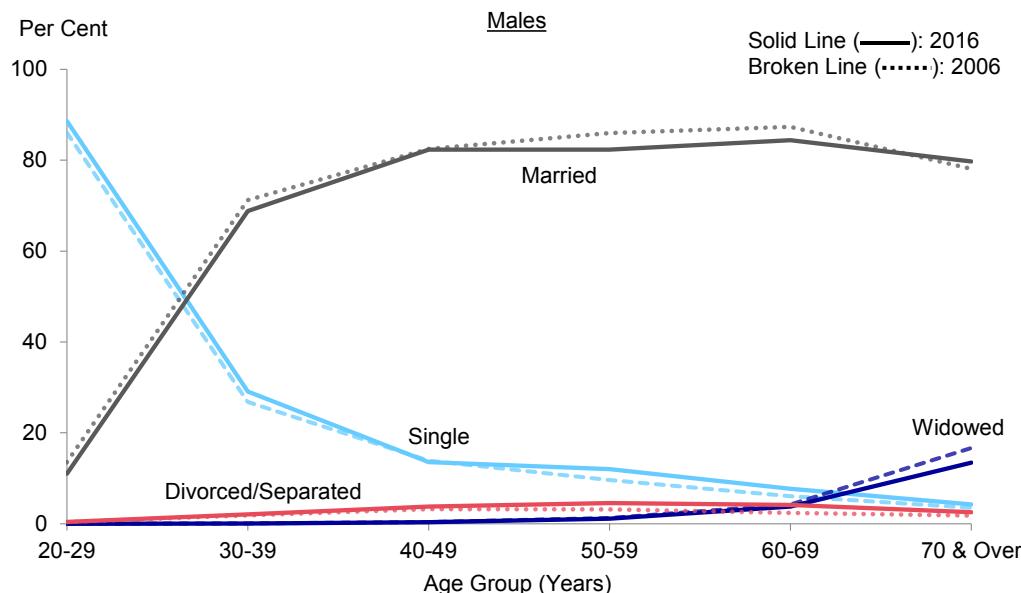

There were proportionally more females who were widowed, divorced or separated compared to their male counterparts. Correspondingly, those who were married or single accounted for smaller shares in the female population than the male population.

Chart 1.6 Marital Status of Resident Population Aged 15 Years and Over by Sex

Marital distribution of the resident population varied across age groups. At the younger ages of 20-29 years, the predominant marital status was single for both males and females (Chart 1.7). However, at ages of 30 years and over, married persons generally formed the majority of the resident population. The only exception was for females aged 70 years and over, of which widowed persons overtook married persons as the largest group. This could be mainly attributed to the higher life expectancy of females as compared to males.

Chart 1.7 Distribution of Marital Status Among Resident Population by Selected Age Group and Sex

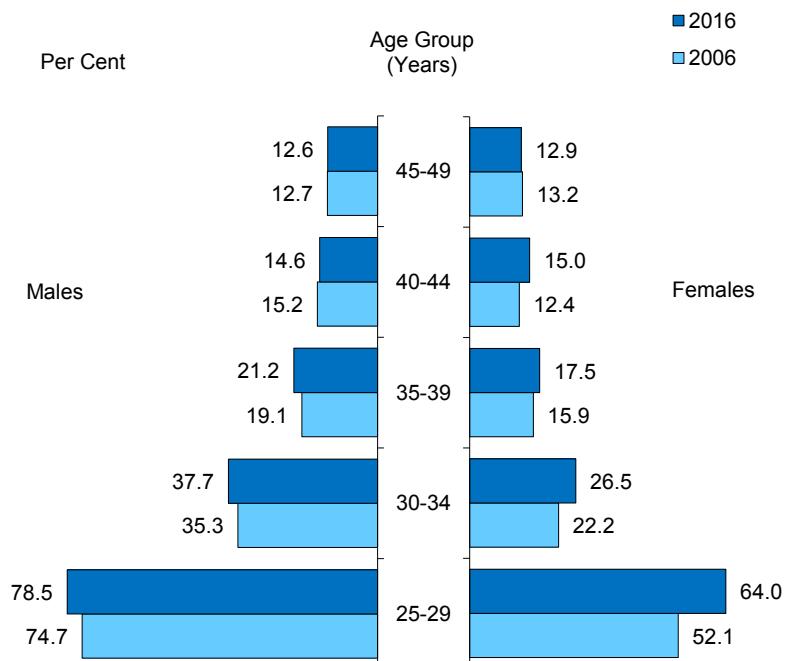

Proportion of Singles

The proportion of singles among the younger males and females aged below 40 years rose between 2006 and 2016. In 2006, 74.7 per cent of males and 52.1 per cent of females aged 25-29 years were single (Chart 1.8). In 2016, the proportions grew to 78.5 per cent and 64.0 per cent respectively.

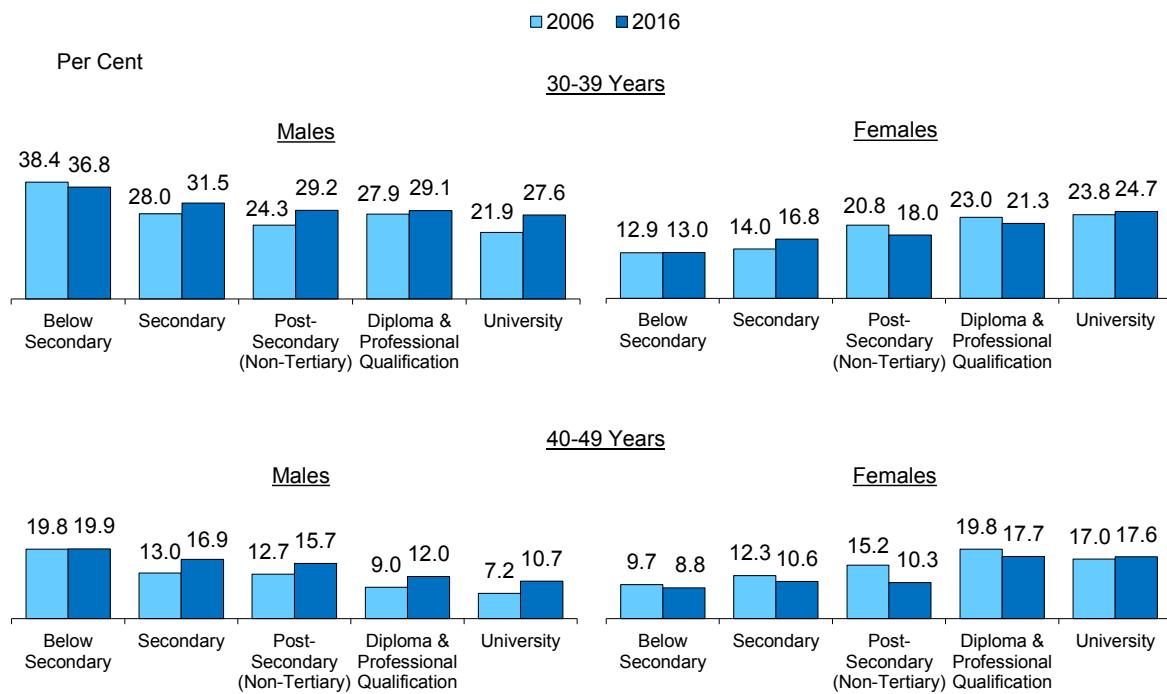

Among males and females aged 30-34 years, 37.7 per cent and 26.5 per cent respectively were single in 2016. The corresponding proportions for those aged 35-39 years were 21.2 per cent and 17.5 per cent.

Chart 1.8 Proportion of Singles Among Resident Population by Selected Age Group and Sex

Singlehood was generally more prevalent among males with lower educational qualifications and females with higher educational qualifications. In 2016, the proportion of singles among males aged 40-49 years with below secondary qualifications was 19.9 per cent, almost double the 10.7 per cent among those with university qualifications (Chart 1.9). In contrast, the proportion of singles among females aged 40-49 years with below secondary qualifications was 8.8 per cent, half of the 17.6 per cent among those with university qualifications.

Chart 1.9 Proportion of Singles Among Resident Population by Selected Age Group, Sex and Highest Qualification Attained

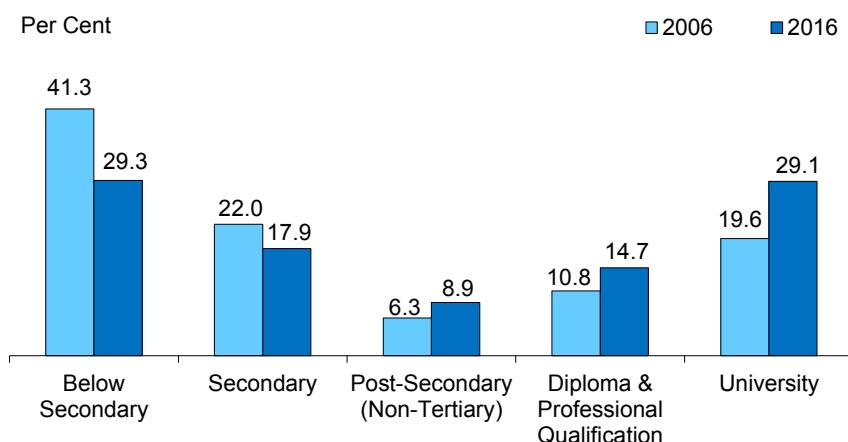

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Education Profile¹

More than half (52.8 per cent) of the resident population aged 25 years and over had at least post-secondary qualifications in 2016, higher than 36.7 per cent in 2006 (Chart 1.10).

The proportion of university graduates rose from 19.6 per cent in 2006 to 29.1 per cent in 2016. Over the same period, the proportion of diploma & professional qualifications also increased from 10.8 per cent to 14.7 per cent.

**Chart 1.10 Highest Qualification Attained of Resident Population
Aged 25 Years and Over**

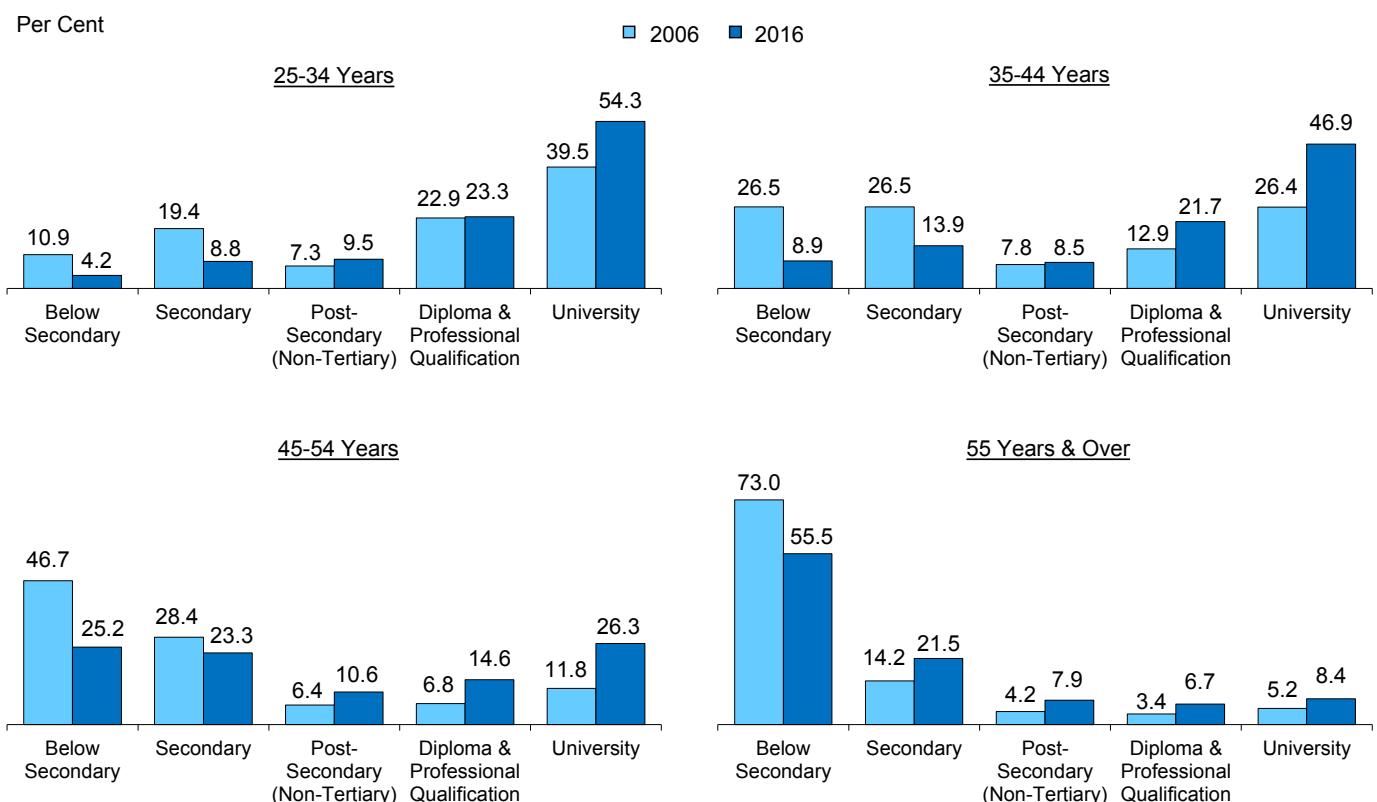

¹ Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

A higher proportion of residents across all age groups attained post-secondary qualifications over the past decade (Chart 1.11).

Among residents aged 25-34 years, the proportion of university graduates rose from 39.5 per cent in 2006 to 54.3 per cent in 2016, while the proportion of those with diploma & professional qualifications was stable at about 23 per cent.

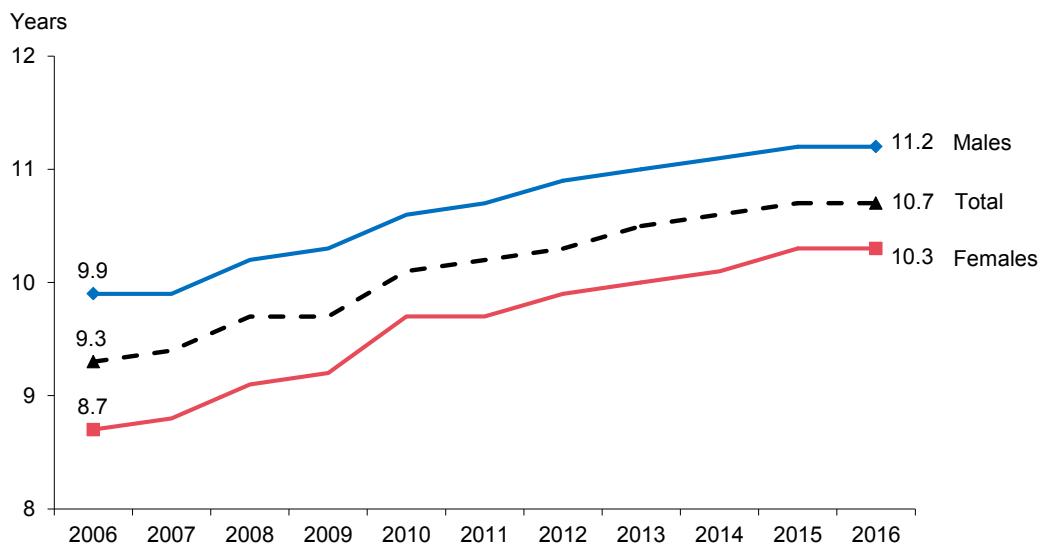

Among those aged 35-44 years, the proportion rose from 26.4 per cent to 46.9 per cent for university graduates, and from 12.9 per cent to 21.7 per cent for those with diploma & professional qualifications during the same period.

**Chart 1.11 Highest Qualification Attained of Resident Population
Aged 25 Years and Over by Age Group**

Reflecting the improvement in educational attainment of residents aged 25 years and over, the average number of years of schooling increased from 9.3 years in 2006 to 10.7 years in 2016 (Chart 1.12).

Chart 1.12 Mean Years of Schooling Among Resident Population Aged 25 Years and Over by Sex

Geographical Distribution

As at end-June 2017, 56.3 per cent of the 3.97 million residents in Singapore were concentrated in ten planning areas² (Chart 1.13). There were four planning areas with more than 250,000 residents, namely Bedok, Jurong West, Tampines and Woodlands, with Bedok leading with 284,930 residents.

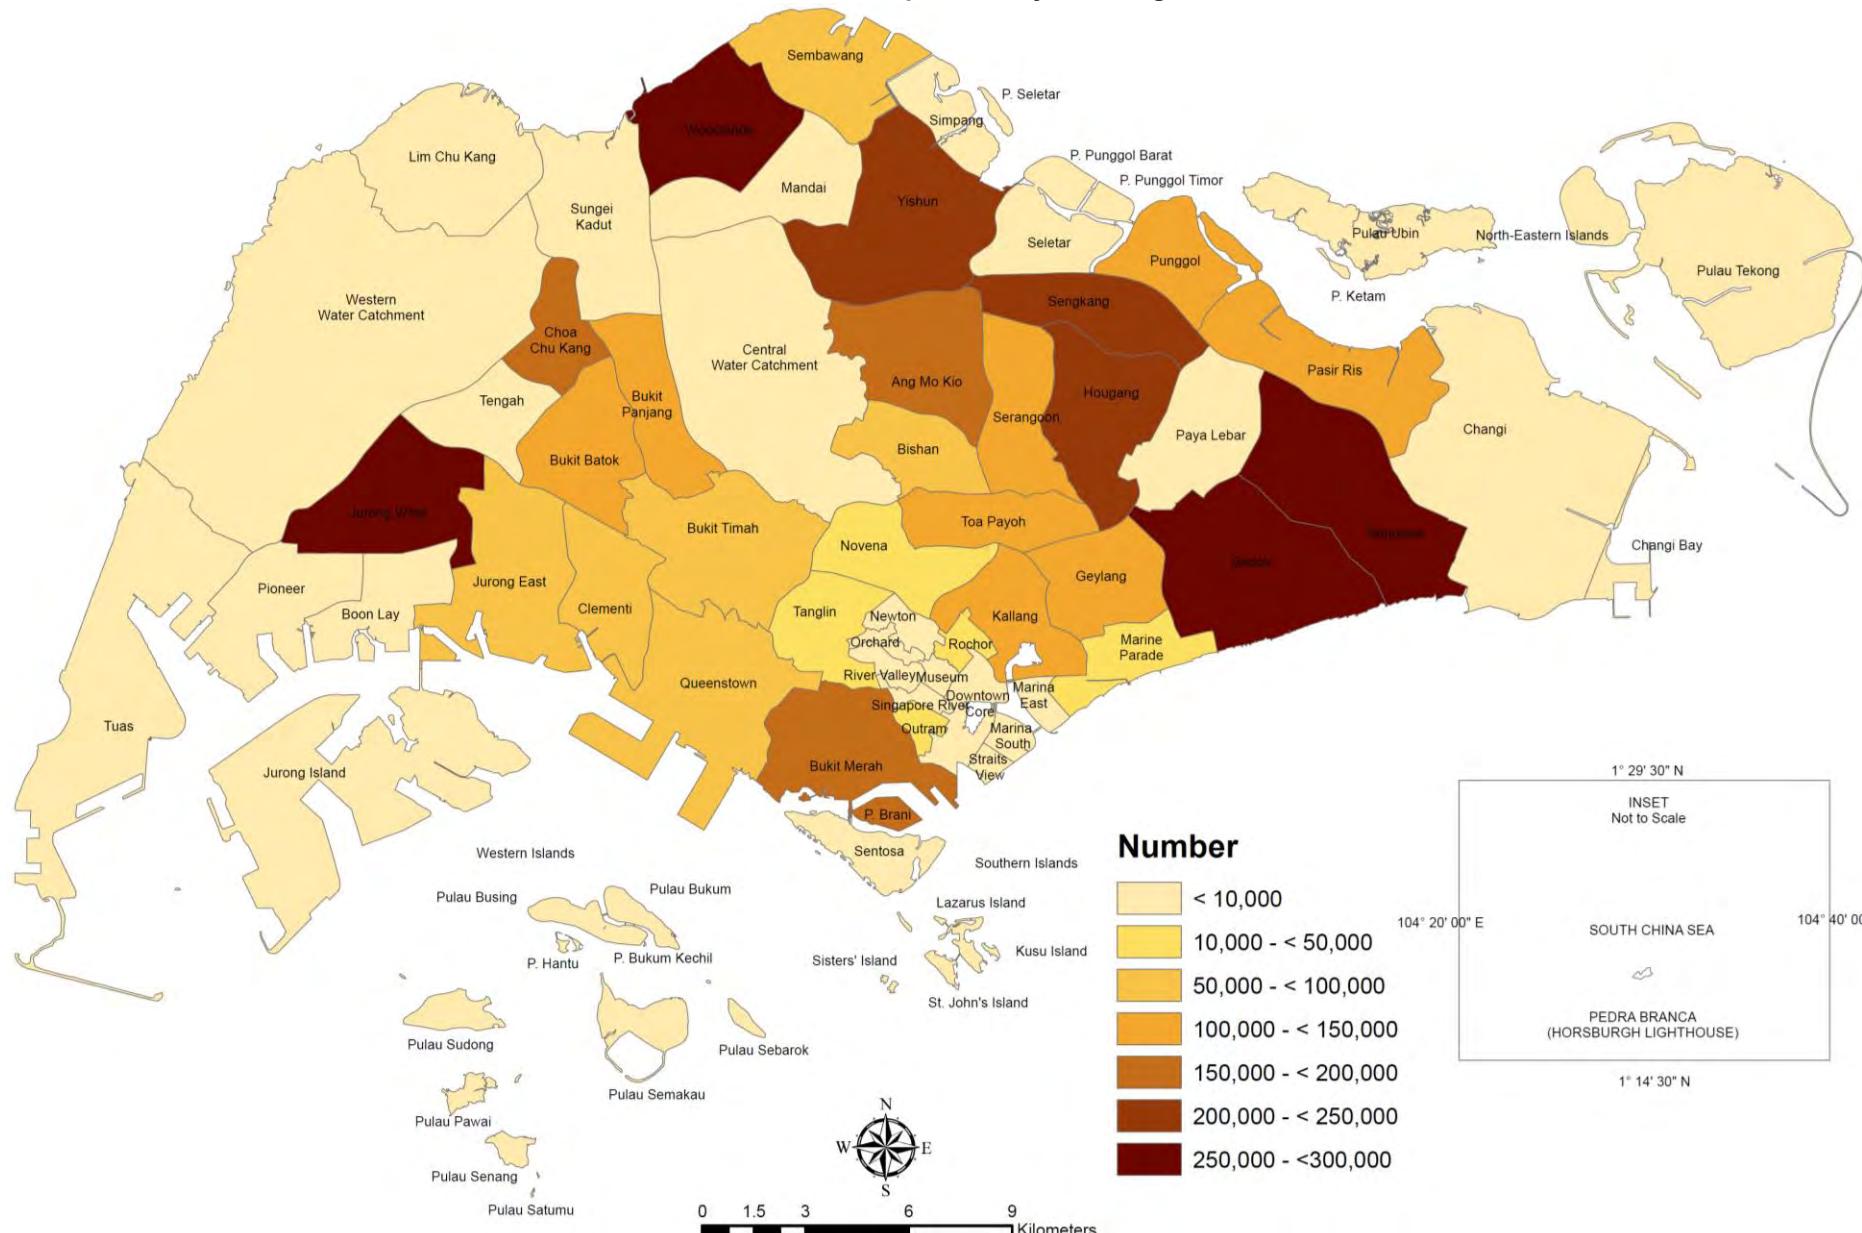

In 2017, the top two planning areas with the highest proportion of residents aged 65 years and over were Outram and Rochor (Chart 1.15). Approximately, one in five residents in each of these two planning areas were aged 65 years and over.

In comparison, relatively newer estates were observed to house a higher proportion of children aged below 5 years. In 2017, Punggol had the highest proportion of children aged below 5 years at 10.9 per cent (Chart 1.16). Eleven other planning areas each had the proportion of children aged below 5 years in the range of 5.0 to 7.9 per cent.

An estimated 3.16 million residents, or about four in five residents, resided in HDB flats in 2017 (Chart 1.17). There were six planning areas where more than 90 per cent of the residents were staying in HDB dwellings. Woodlands topped the chart by having the highest proportion of HDB dwellers, followed by Jurong West.

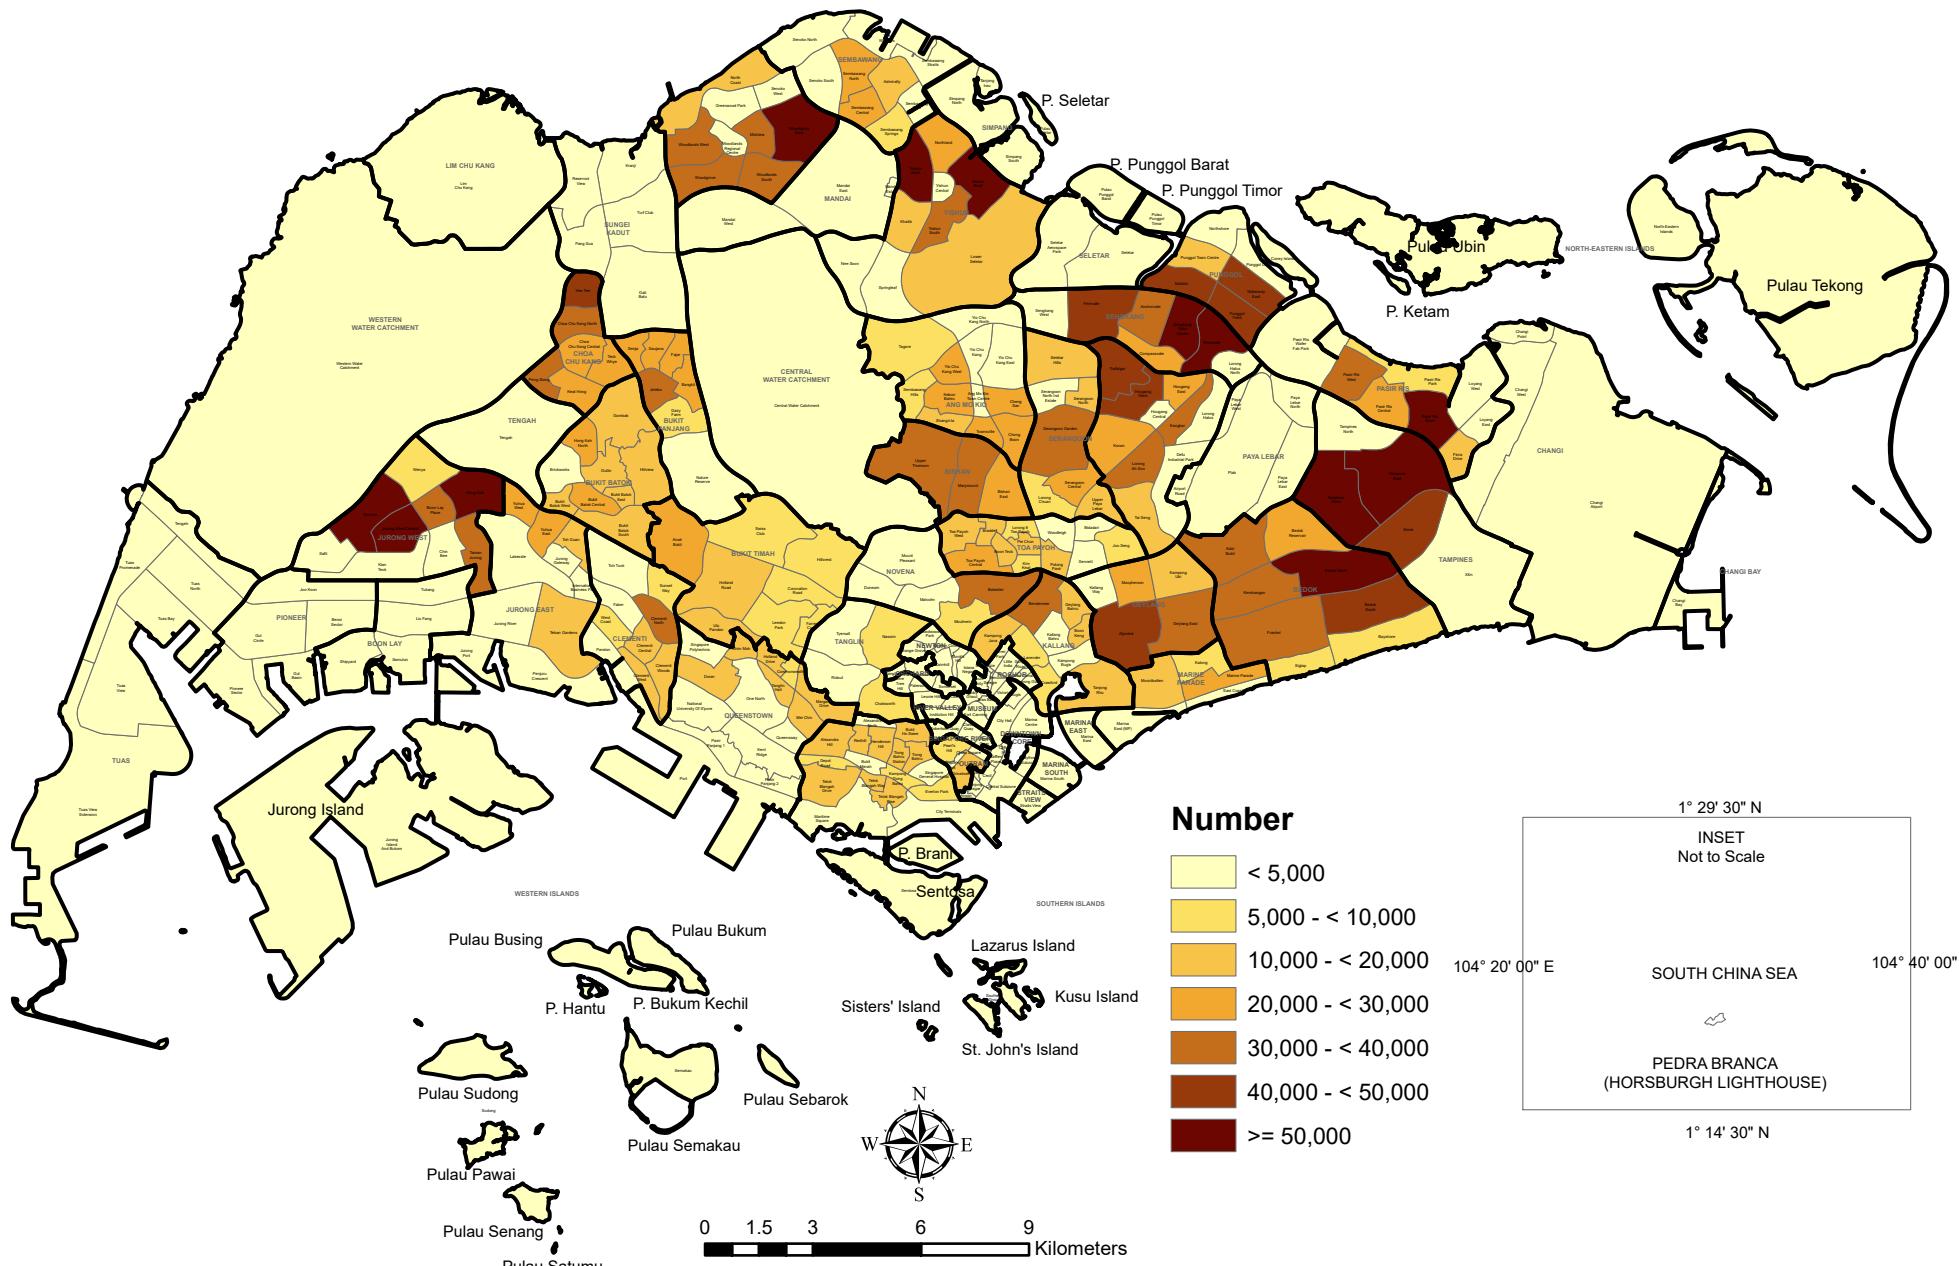

² Planning areas refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2014.

Chart 1.13 Resident Population by Planning Area, June 2017

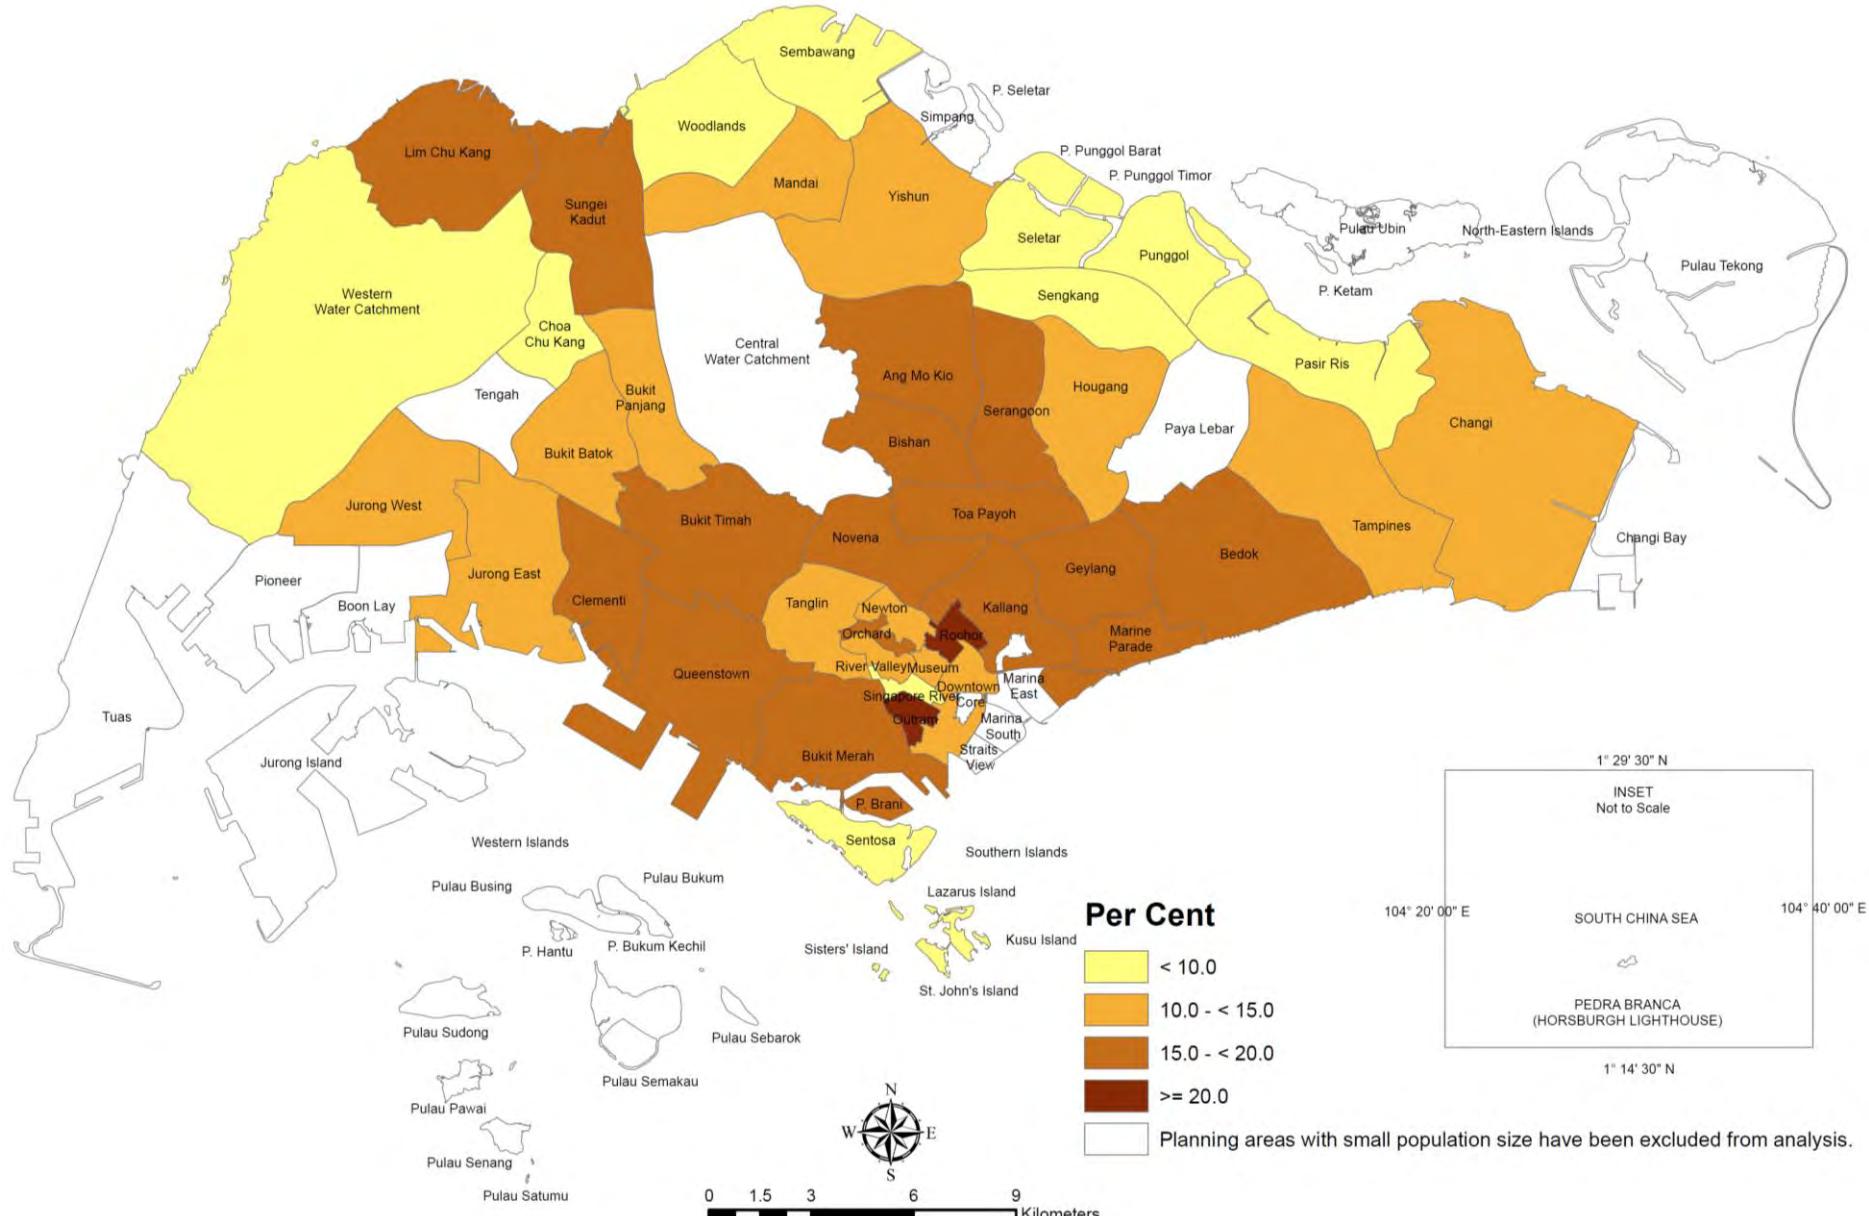

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2014 planning area boundaries and the Singapore Land Authority's 2017 Singapore island profile. The Master Plan 2014 is a forward looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

Chart 1.17 Proportion of Resident Population Staying in HDB Flats by Planning Area, June 2017

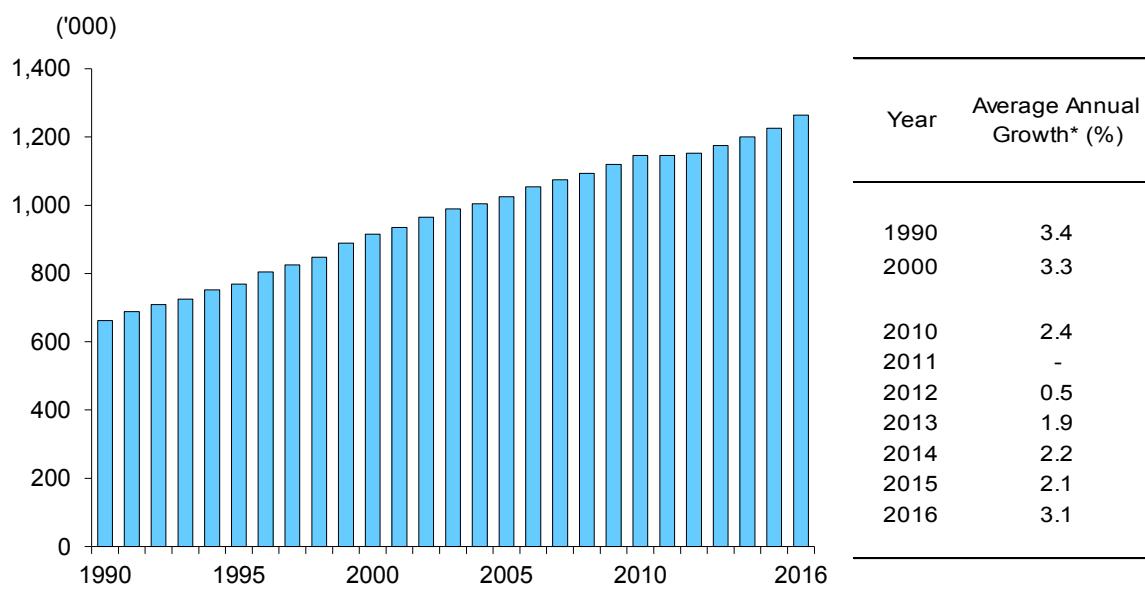

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2014 planning area boundaries and the Singapore Land Authority's 2017 Singapore island profile. The Master Plan 2014 is a forward looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

Chapter 2 Households and Housing

Resident Households

There were 1.26 million resident households in 2016, a growth of 3.1 per cent over 2015 (Chart 2.1).

Chart 2.1 Resident Households

Note: '*' denotes nil or negligible.

* For 1990 and 2000, growth rates refer to the annualised change over the last ten years. From 2010 onwards, growth rate refers to the change over the previous year.

Household

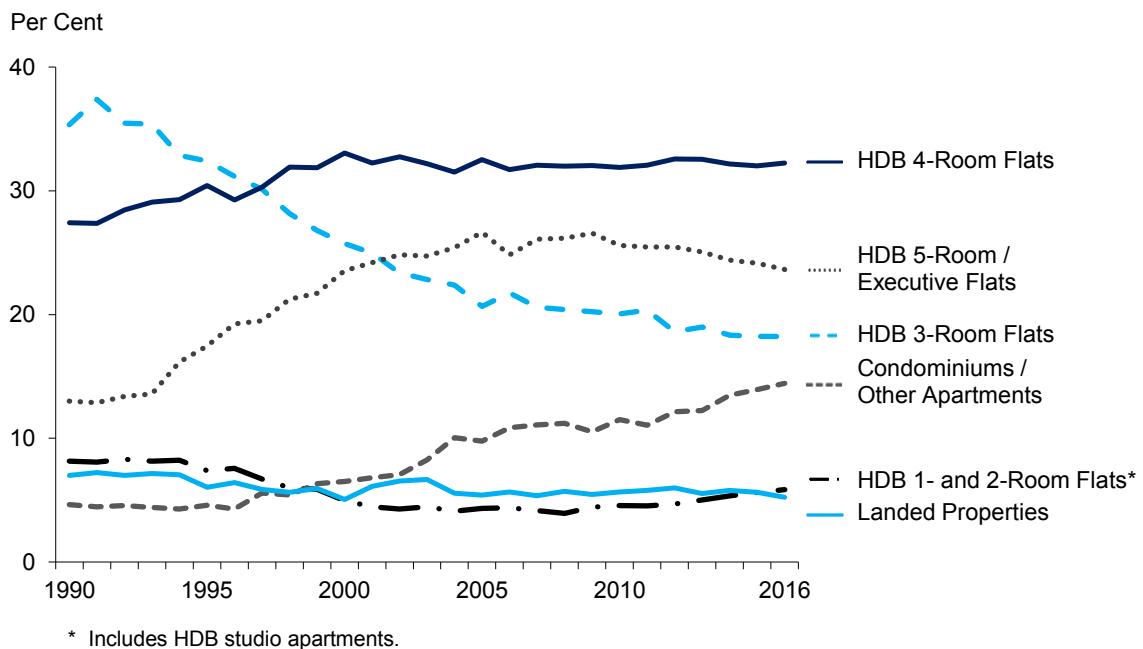

A household refers to a group of two or more persons living together in the same house and sharing common food or other arrangements for essential living. It also includes a person living alone or a person living with others but having his own food arrangements. Although persons may be living in the same house, they may not be members of the same household.

A resident household refers to a household headed by a Singapore citizen or permanent resident.

Type of Dwelling

The majority of resident households stayed in the Housing and Development Board (HDB) flats. In 2016, 32.2 per cent of the households stayed in HDB 4-room flats, while another 23.6 per cent and 18.2 per cent stayed in HDB 5-room & executive flats and HDB 3-room flats respectively (Chart 2.2). Households living in HDB 1- & 2-room flats constituted 5.9 per cent. While the proportion of households in landed properties remained relatively stable for over a decade, the proportion living in condominiums & other apartments more than doubled from 6.5 per cent in 2000 to 14.4 per cent in 2016.

Chart 2.2 Proportion of Resident Households by Selected Type of Dwelling

Home Ownership

The proportion of resident households owning their homes was high at above 90 per cent since 2012 (Table 2.1). The number of households who owned their homes crossed the 1 million mark in 2011 and further rose to 1.15 million in 2016.

Table 2.1 Resident Households by Tenancy of Household

Year	Tenancy ('000)			Home Ownership Rate (%)
	Total*	Owner	Tenant	
1990	661.7	578.9	78.6	87.5
2000	915.1	841.6	63.4	92.0
2010	1,145.9	998.9	132.5	87.2
2011	1,146.2	1,015.9	103.5	88.6
2012	1,152.0	1,038.2	106.8	90.1
2013	1,174.5	1,062.5	105.7	90.5
2014	1,200.0	1,083.4	109.8	90.3
2015	1,225.3	1,112.4	106.2	90.8
2016	1,263.6	1,149.1	107.6	90.9

* Includes resident households in dwellings provided free by employers/others.

Tenancy of Household

Tenancy refers to the tenure status of the household with respect to the dwelling in which the household members live.

“Owner” refers to a household where the household head or any other member owns the house.

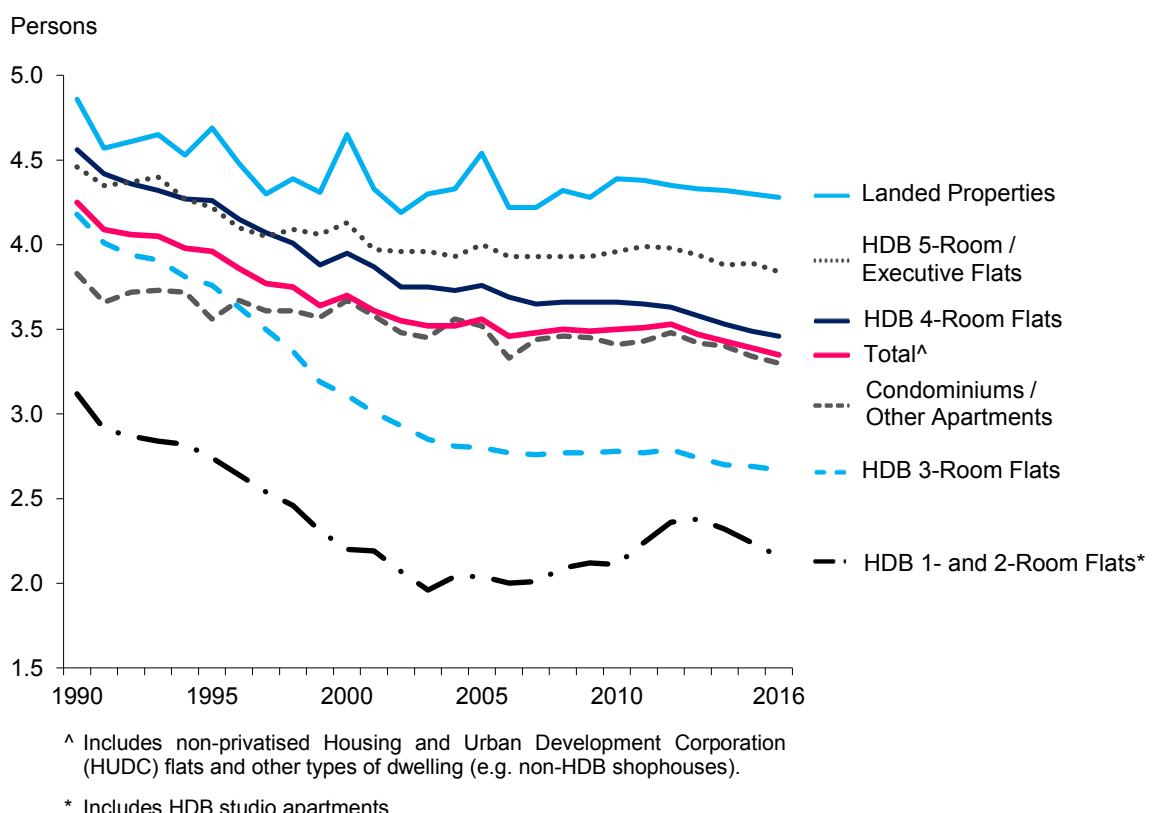

“Tenant” refers to a household which rents the dwelling or part of it.

Household Size

Household sizes among resident households were getting smaller. The average household size shrank from the last peak at 3.53 persons in 2012 to 3.35 persons in 2016 (Chart 2.3).

In general, those with larger family sizes lived in bigger homes. In 2016, households staying in the landed properties had the largest household size at 4.28 persons on average, followed by those staying in HDB 5-room & executive flats at 3.84 persons. In contrast, the average household size was the smallest at 2.16 persons for those living in HDB 1- & 2-room flats.

Chart 2.3 Average Household Size of Resident Households by Selected Type of Dwelling

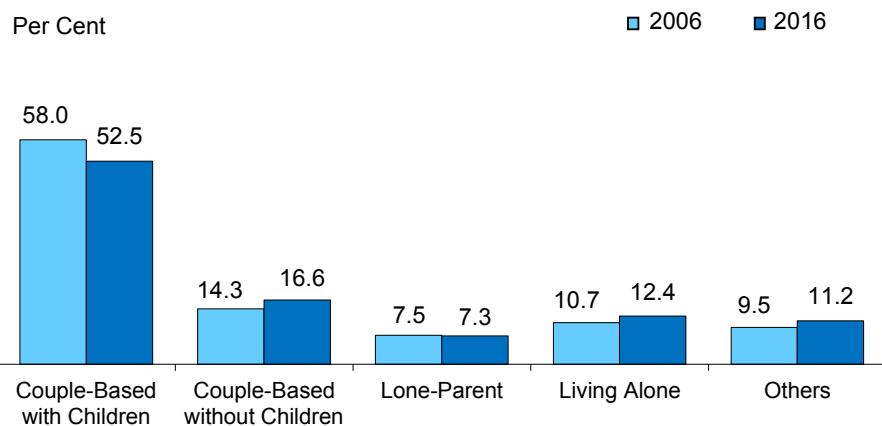

Household Living Arrangement

Couple-based households with children continued to be the most common living arrangement among resident households, although the proportion of such households declined from 58.0 per cent in 2006 to 52.5 per cent in 2016 (Chart 2.4).

Conversely, the shares rose for the couple-based households without children (from 14.3 per cent to 16.6 per cent) and one-person households (from 10.7 per cent to 12.4 per cent) over the past decade.

Chart 2.4 Resident Households by Household Living Arrangement

Household Living Arrangement

Couple-based households refer to households with a married head and spouse. This category is further split into those living with children and without children.

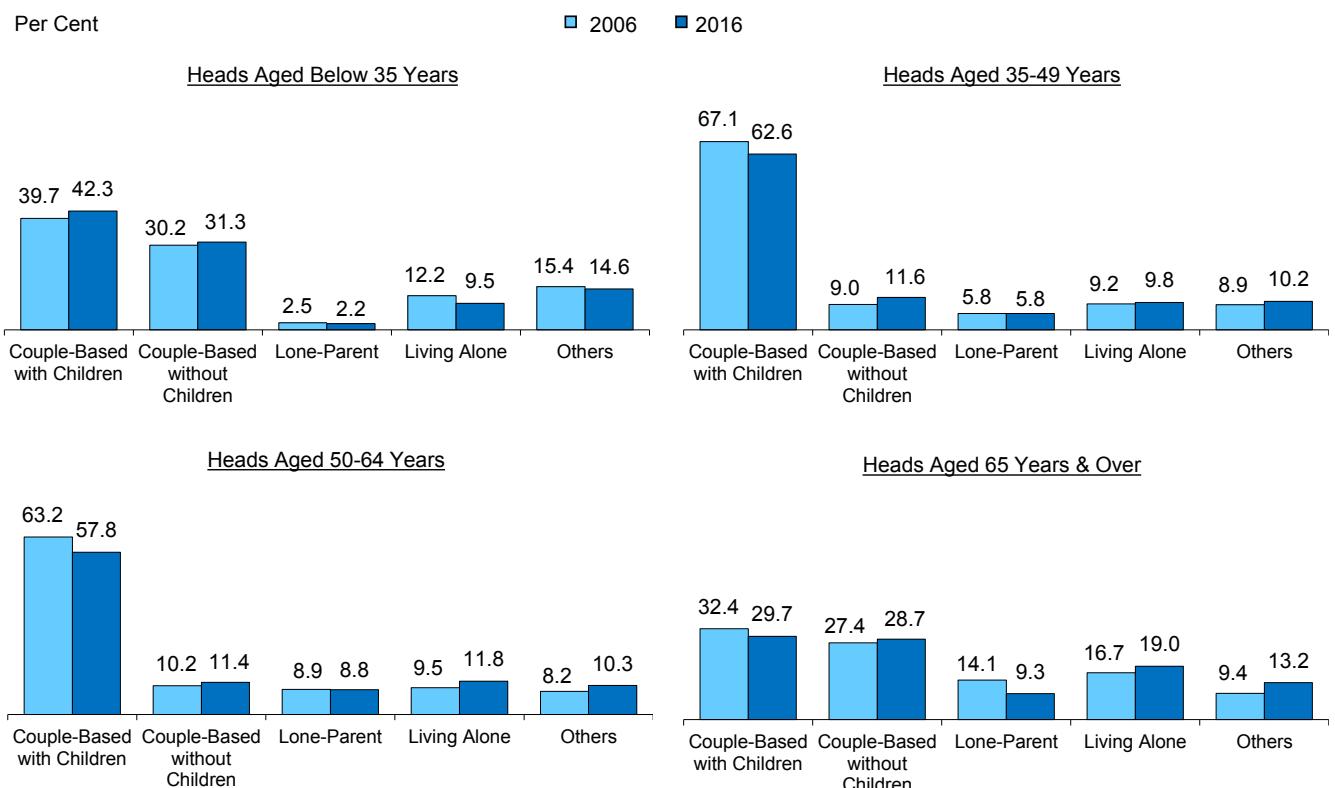

Lone-parent households refer to households whose head is never-married/widowed/divorced/separated and living with children aged below 16 years or never-married children.

Living alone households refer to one-person households. These include ever-married persons who are living alone as their children have grown up and moved out from the parental home.

Household living arrangement varied distinctly by age group of the household head, reflecting different stages of the lifecycle. In 2016, couple-based households with children were most prevalent among households with heads aged 35-49 years (62.6 per cent), followed by those aged 50-64 years (57.8 per cent) (Chart 2.5). As for the couple-based households without children, the proportion was the highest among households with heads aged below 35 years (31.3 per cent), followed by those aged 65 years and over (28.7 per cent). There were also proportionately more lone-parent and one-person households among heads aged 65 years and over compared to their younger counterparts.

Compared to 2006, the proportion of couple-based households with children rose for the younger heads below 35 years old, but declined among heads of all other age groups 35 years and over.

Chart 2.5 Resident Households by Age Group of Head and Household Living Arrangement

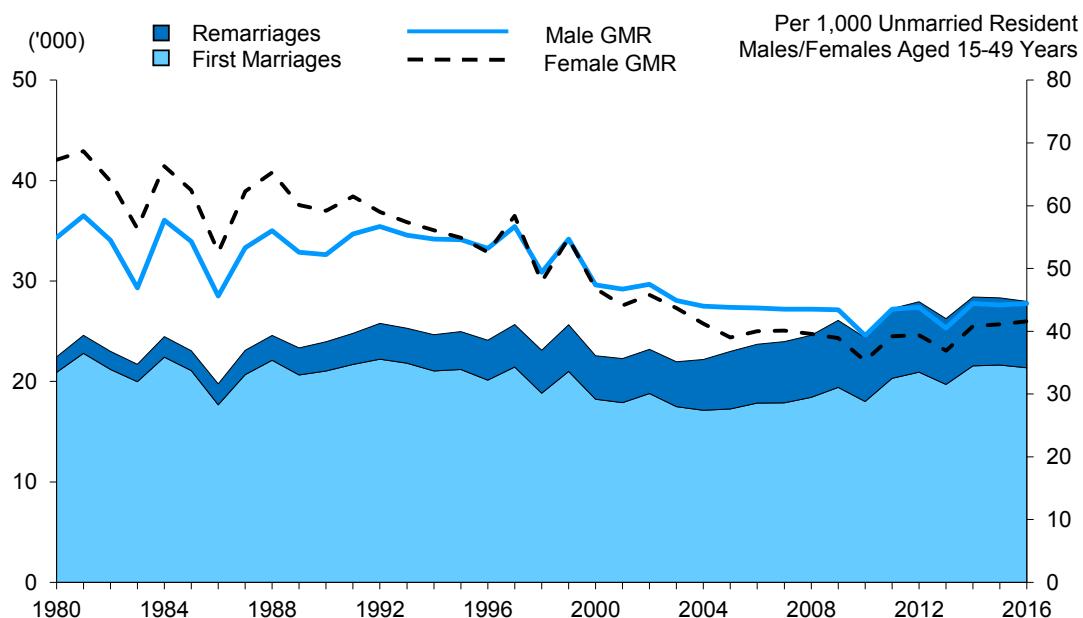

Chapter 3 Family Formation and Dissolution

Marriages

A total of 27,971 civil and Muslim marriages were registered in 2016, slightly lower (by 1.2 per cent) than the 28,322 marriages in 2015 (Chart 3.1). Slightly more than three quarters or 21,364 marriages in 2016 were first marriages where neither party had previously been married.

Chart 3.1 Total Marriages and General Marriage Rate (GMR)

Note: Prior to 1984, data on GMR are based on total grooms/brides and total population comprising residents (i.e. Singapore citizens and permanent residents) and non-residents. Data from 1984 onwards are based on resident grooms/brides and resident population.

Total Marriages and Divorces

Statistics on marriages comprise civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. They are obtained from records maintained by the Registry of Marriages and the Registry of Muslim Marriages.

Statistics on divorces and annulments are obtained from records maintained by the Family Justice Courts and Syariah Court. The records on revocation of divorces are obtained from the Registry of Muslim Marriages. Separations that do not confer on the parties the right to remarry are not covered.

More details on marriages and divorces are available in the publication "Statistics on Marriages and Divorces, 2016".

The general marriage rate remained relatively stable since 2014. In 2016, the rate for males was 44.4 marriages per 1,000 unmarried males aged 15-49 years, up from the last trough of 40.5 marriages in 2013. For females, the 2016 rate was 41.6 marriages per 1,000 unmarried females aged 15-49 years, higher than the 36.9 marriages in 2013.

General Marriage Rate

The rate is defined as the number of marriages registered among persons aged 15-49 years during the year, out of every thousand unmarried population in the same age group.

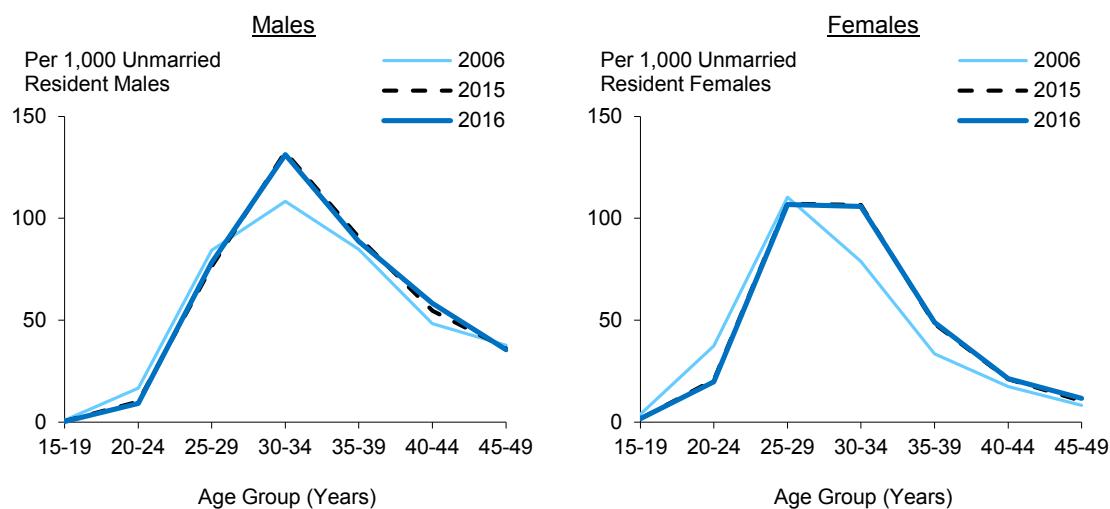

Age-Specific Marriage Rate

Marriage rates in 2016 remained stable across all age groups compared to 2015 (Chart 3.2).

Compared to 2006, there was a growing trend towards later marriages. Marriage rates for residents aged below 30 years declined slightly between 2006 and 2016, while the rates rose generally for those aged 30 and over. The largest increase was observed among those aged 30-34 years over the same period.

As compared to other age groups, the marriage rates in 2016 were higher among those aged 30-34 years for males, and among those aged 25-29 years and 30-34 years for females.

Chart 3.2 Age-Sex Specific Marriage Rate

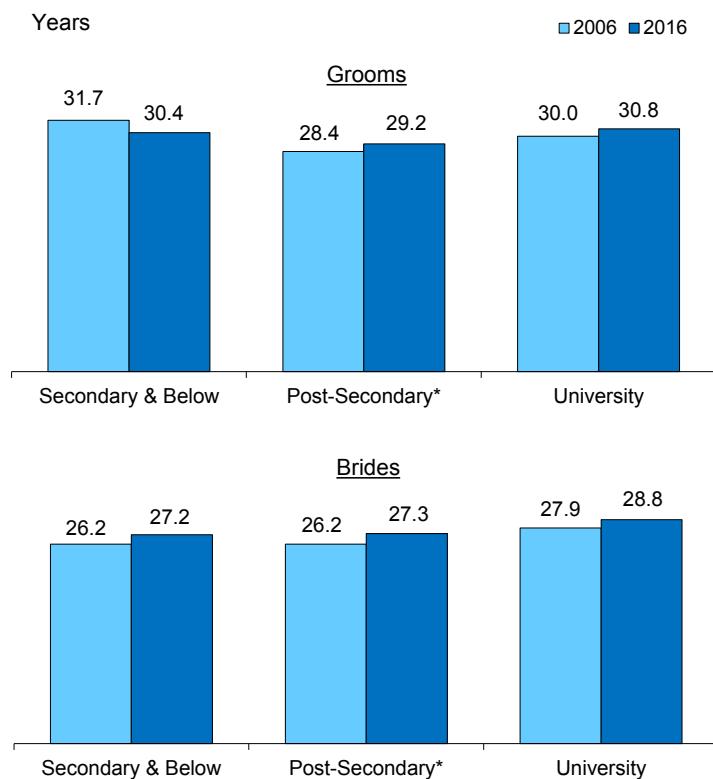

Age-Specific Marriage Rate

It is defined as the number of marriages registered within a specific age group during the year, out of every thousand unmarried population in the same age group.

Median Age at First Marriage

Across most educational groups, grooms and brides were marrying later in 2016 compared to 2006 (Chart 3.3). In 2016, the median age at first marriage was the highest for both grooms and brides with university qualifications at 30.8 years and 28.8 years respectively.

Chart 3.3 Median Age at First Marriage of Grooms and Brides by Educational Qualification

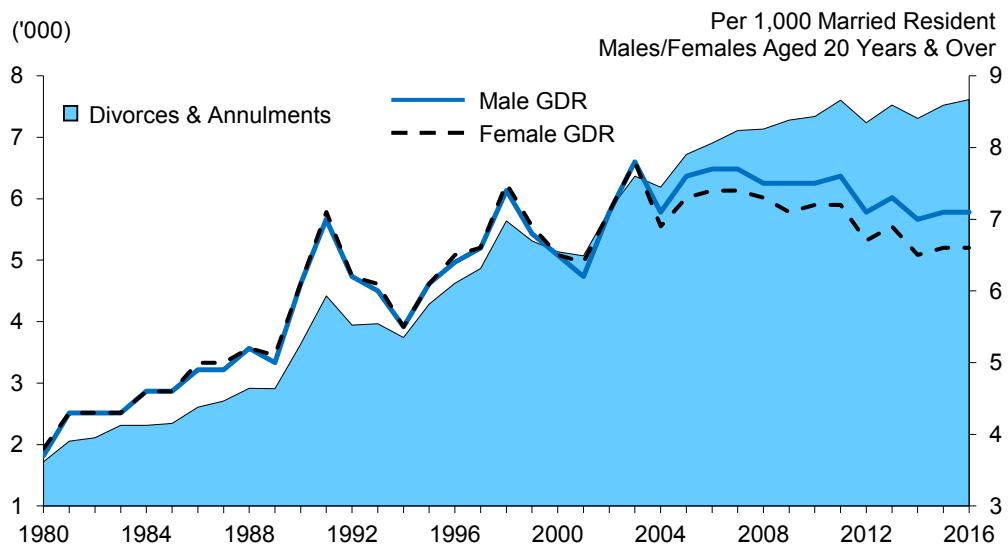

* Post-Secondary comprises Post-Secondary (Non-Tertiary) and Diploma & Professional Qualification.

Marital Dissolutions

There were a total of 7,614 divorces and annulments in 2016, 1.2 per cent higher than the 7,522 marital dissolutions in 2015 (Chart 3.4).

Despite the increase in the total number of marital dissolutions, the general divorce rate in 2016 was unchanged from the year before. The rate for males remained at 7.1 per 1,000 married male residents aged 20 years and over. For females, it remained at 6.6 per 1,000 married female residents aged 20 years.

Chart 3.4 Total Marital Dissolutions and General Divorce Rate (GDR)

Note: Data on GDR include annulments. From 2004 onwards, data on GDR are based on divorces and annulments where either or both spouses are residents (i.e. Singapore citizens or permanent residents).

General Divorce Rate

The rate is defined as the number of divorces and annulments granted to married persons aged 20 years and over during the year, out of every thousand married population in the same age group.

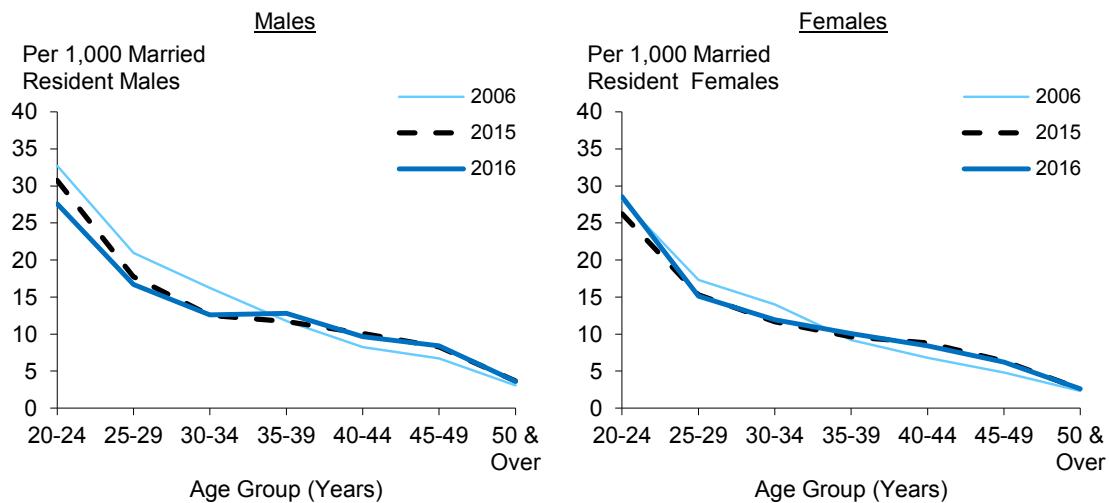

Annulment

This refers to the invalidation of a marriage. Parties whose marriages have been annulled are conferred the status of never having been married to each other.

Age-Specific Divorce Rate

The divorce rates among married males and females in 2016 were largely comparable with 2015, and also with 2006 for most age groups (Chart 3.5). Although divorces were still more prevalent among younger persons than their older counterparts, there was a noticeable decline in divorce rates for the younger age groups over the decade, especially for males aged below 35 years.

Chart 3.5 Age-Sex Specific Divorce Rate

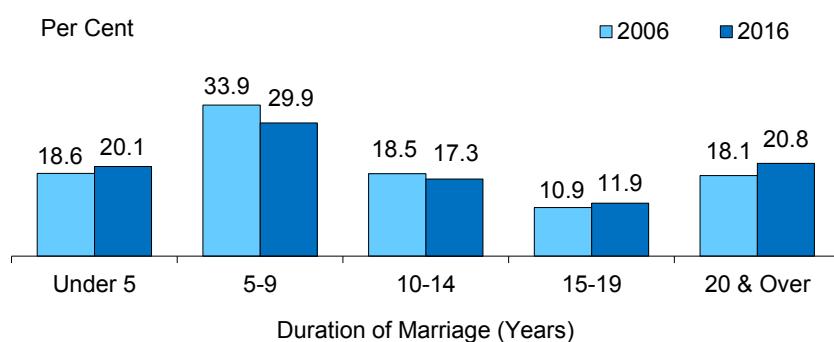

Age-Specific Divorce Rate

It is defined as the number of divorces and annulments granted to a specific age group during the year, out of every thousand married population in the same age group.

Marriage Duration of Divorcing Couples

The median marriage duration of divorcing couples in 2016 was 10.0 years, an increase from the 9.6 years in 2006. Couples who were married for 5-9 years constituted the largest share (29.9 per cent) of divorces in 2016, followed by those who were married for 20 years and over (20.8 per cent) (Chart 3.6).

Chart 3.6 Divorces by Duration of Marriage

Note: Data exclude annulments.

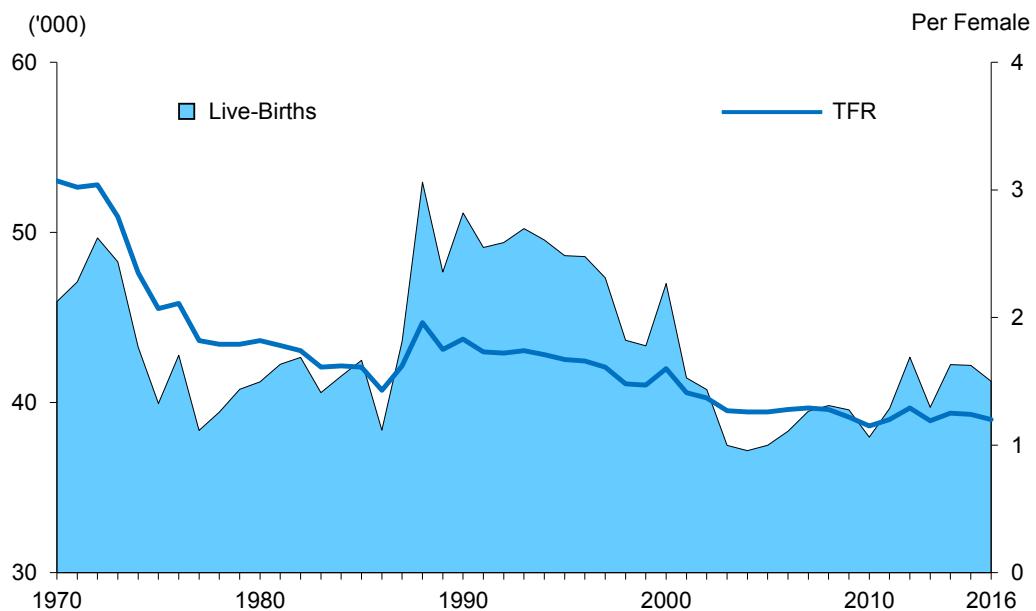

Chapter 4 Fertility

Births and Fertility Rate

In 2016, there were a total of 41,251 live-births, 2.2 per cent lower than the 42,185 live-births in 2015 (Chart 4.1). The number of resident births (i.e. births with at least one parent who is a Singapore citizen or permanent resident) also declined, from 37,861 in 2015 to 36,875 in 2016.

Singapore's resident total fertility rate (TFR) was 1.20 births per female in 2016, down from 1.24 in 2015.

Chart 4.1 Total Live-Births and Total Fertility Rate (TFR)

Note: Prior to 1980, data on TFR pertain to total population. From 1980 onwards, data on TFR pertain to resident population (i.e. Singapore citizens and permanent residents).

Live-Births

Statistics on live-births are obtained from records maintained by the Registry of Births and Deaths. The statistics refer to all live-births occurring within Singapore and its territorial waters as registered under the Registration of Births and Deaths Act (Chapter 267), and are compiled based on date of occurrence.

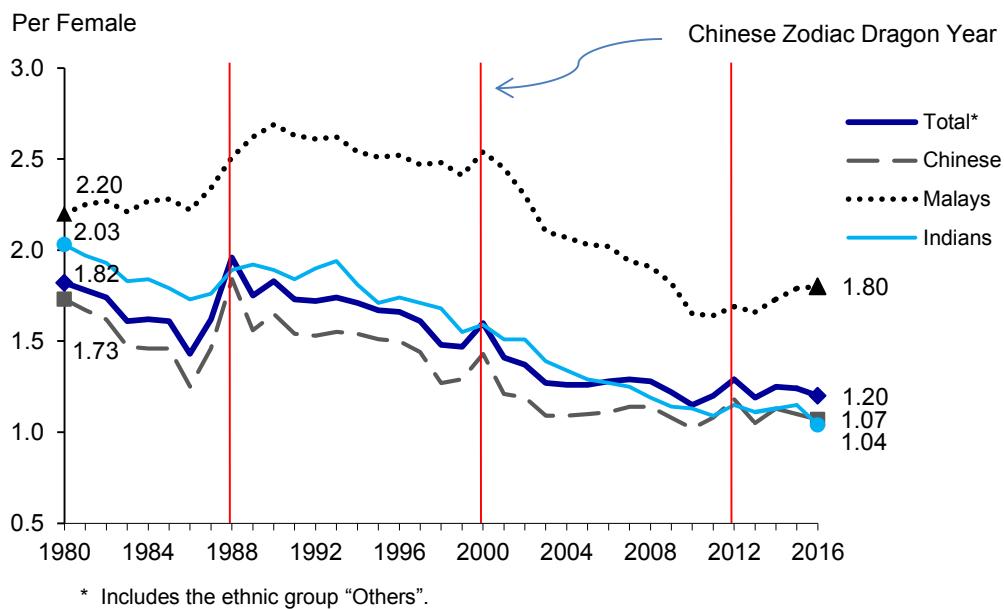

Total Fertility Rate

The rate refers to the average number of live-births each female would have during her reproductive years if she were to experience the age-specific fertility rates prevailing during the period.

Ethnic Differentials in Fertility

Compared to 2015, the resident TFR in 2016 increased marginally for the Malays but fell for the Chinese and Indians (Chart 4.2). The TFR remained the highest for the Malays at 1.80 births per female in 2016. This was followed by 1.07 for the Chinese and 1.04 for the Indians.

Chart 4.2 Total Fertility Rate by Ethnic Group

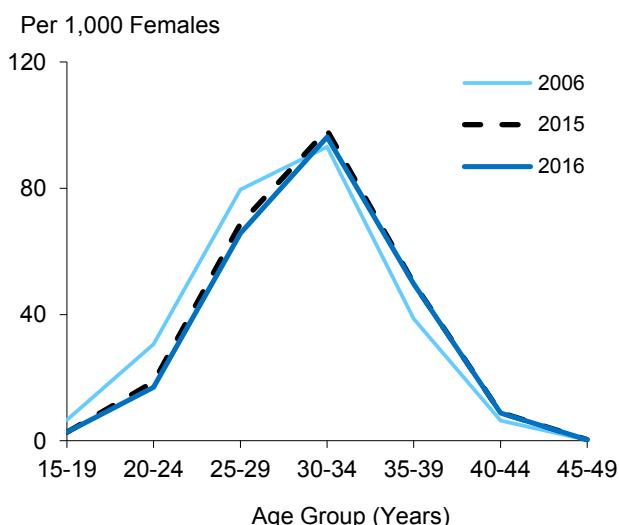

Age-Specific Fertility Rate

Resident fertility rates for females in 2016 remained largely similar to 2015 across all age groups (Chart 4.3).

Compared to 2006, age-specific fertility rates fell for those aged below 30 years in 2016, and rose for those aged 30 years and over. Since 2002, fertility rate had been the highest among females aged 30-34 years compared to the other age groups.

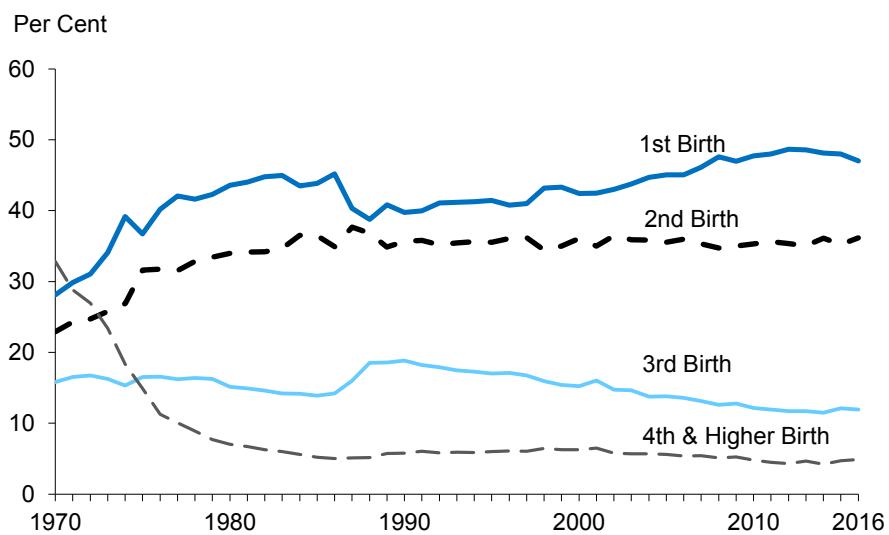

Chart 4.3 Age-Specific Fertility Rate

Births by Birth Order

First order births have constituted the largest share of total live-births since the 1970s. The proportion of first order births was 47.0 per cent in 2016, slightly lower than the peak of 48.6 per cent in 2012 (Chart 4.4). Second order births accounted for 36.2 per cent, while third and higher order births made up the remaining 16.8 per cent in 2016. The proportion of third and higher order births had generally trended downwards for the past two decades.

Chart 4.4 Proportion of Births by Birth Order

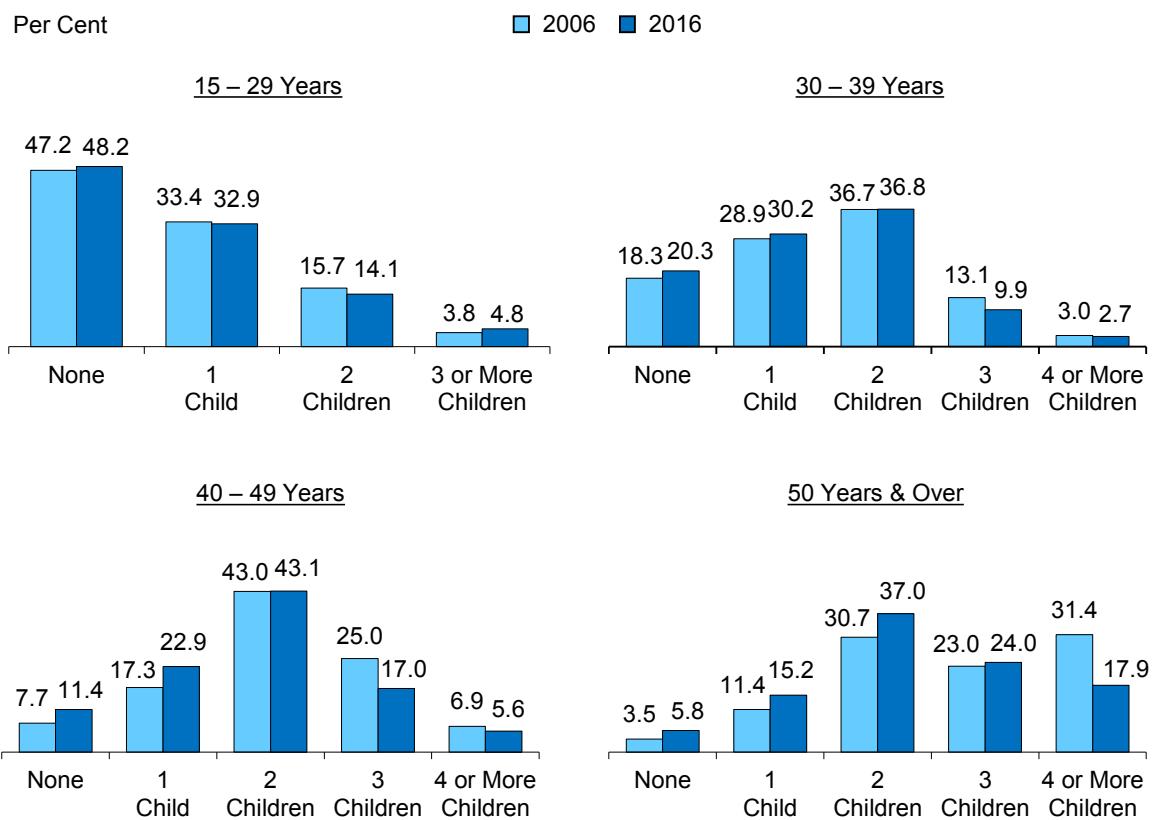

Number of Children Born

Having two children remained the most common among ever-married resident females aged 30 years and over in 2016. Specifically, 36.8 per cent of those aged 30-39 years and 43.1 per cent of those aged 40-49 years had given birth to two children (Chart 4.5).

The proportion of families with more than two children fell. Among ever-married resident females aged 40-49 years who were more likely to have completed child-bearing, those with three children decreased from 25.0 per cent in 2006 to 17.0 per cent in 2016. Similarly, those with four or more children decreased from 6.9 per cent to 5.6 per cent over the same period.

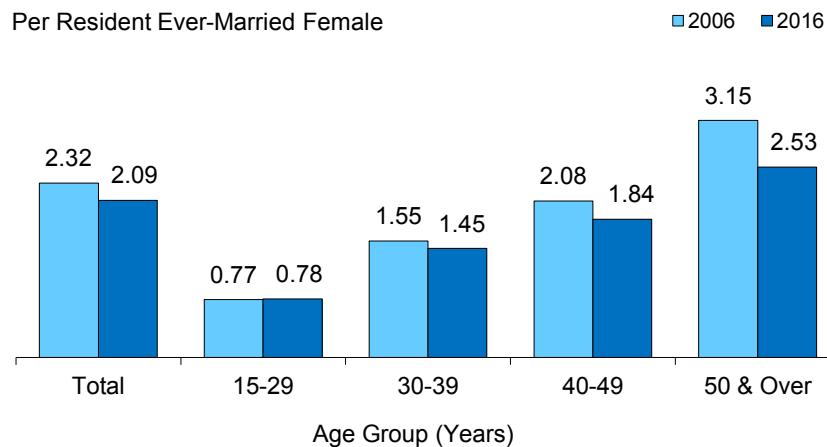

Chart 4.5 Resident Ever-Married Females by Age Group and Number of Children Born

Average Number of Children Born by Age Group of Females

Consequently, the average number of children born to resident ever-married females aged 40-49 years dropped from 2.08 in 2006 to 1.84 in 2016 (Chart 4.6).

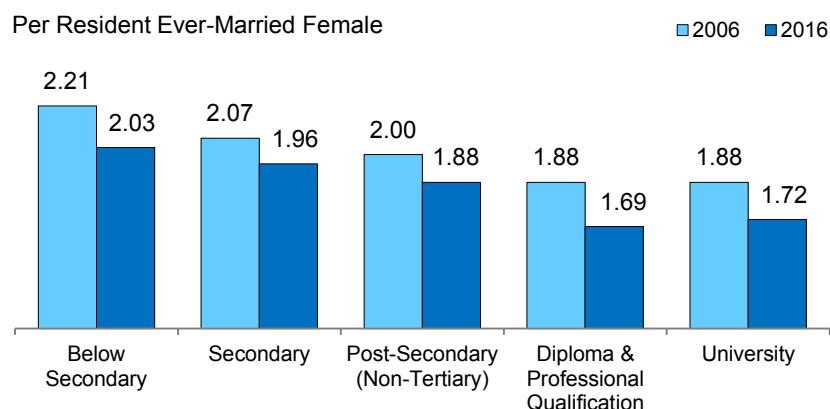

Chart 4.6 Average Number of Children Born by Age Group of Resident Ever-Married Females

Average Number of Children Born by Educational Attainment of Females

Females with higher educational qualifications generally had fewer children than those with lower qualifications (Chart 4.7). Resident ever-married females aged 40-49 years with below secondary qualifications had 2.03 children on average in 2016, higher than their counterparts with diploma & professional qualifications (1.69) or university degrees (1.72).

Chart 4.7 Average Number of Children Born to Resident Ever-Married Females Aged 40-49 Years by Highest Qualification Attained

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

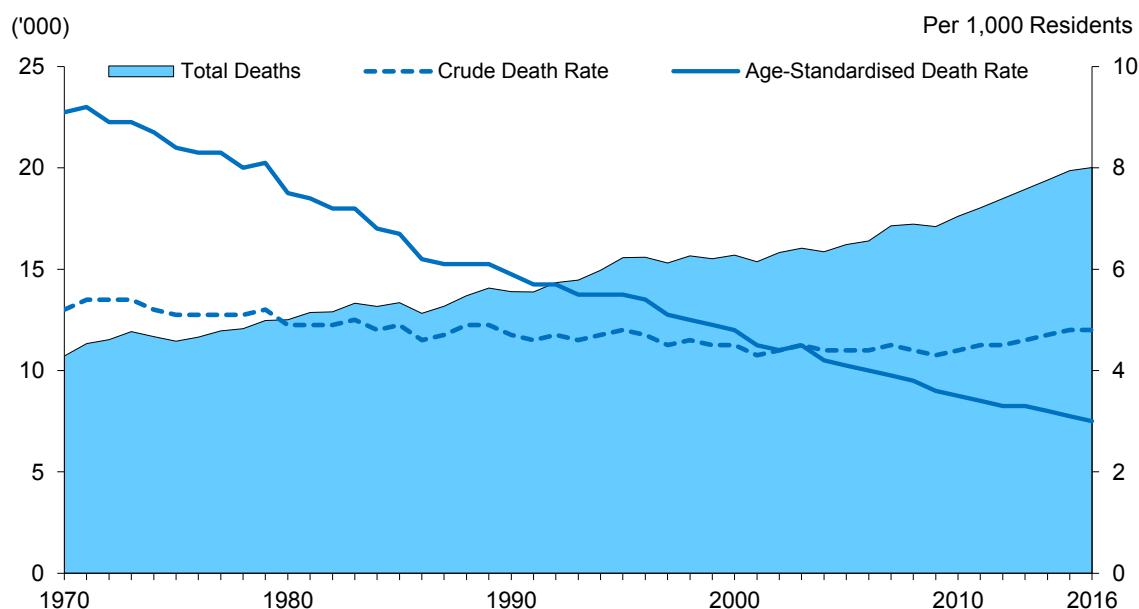

Chapter 5 Mortality

Deaths and Death Rates

The number of total deaths rose to 20,017 in 2016 from 19,862 in 2015 as the population aged (Chart 5.1). The resident crude death rate in 2016 remained the same as the previous year at 4.8 deaths per 1,000 residents.

The resident age-standardised death rate³, which takes into account the population age structure, declined from 3.1 deaths per 1,000 residents in 2015 to 3.0 deaths in 2016. The age-standardised death rate had exhibited a downtrend since 1970, in line with the improvement in health and mortality.

Chart 5.1 Total Deaths, Crude Death Rate and Age-Standardised Death Rate

Note: From 1980 onwards, data on crude death rate and age-standardised death rate pertain to resident population (i.e. Singapore citizens and permanent residents).

Deaths and Death Rates

Statistics on deaths are obtained from records maintained by the Registry of Births and Deaths. The statistics refer to all deaths occurring within Singapore and its territorial waters as registered under the Registration of Births and Deaths Act (Chapter 267), and are compiled based on date of registration.

Crude death rate refers to the number of deaths per thousand population. Age-standardised death rate is another summary indicator of mortality that removes effects of age structure variations in the population over time.

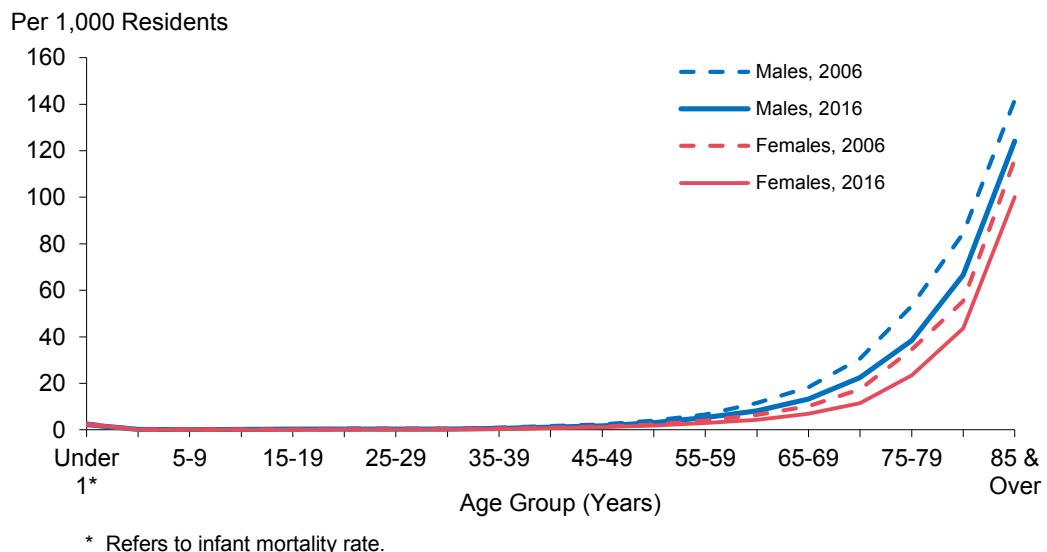

More details on death rates are available in the article “Age-Standardised Death Rate for Singapore” in the Statistics Singapore Newsletter, September 2015.

³ The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

Age-Specific Death Rate

Age-specific death rates for both resident males and females were generally lower in 2016 compared to a decade ago (Chart 5.2). Resident females had lower death rates than resident males in most age groups.

Chart 5.2 Age-Specific Death Rate

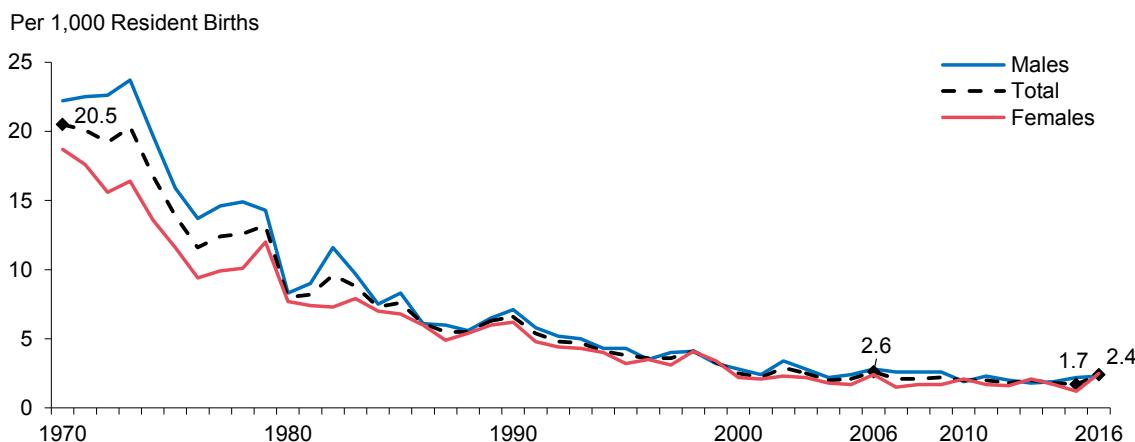

* Refers to infant mortality rate.

Infant Mortality Rate

The infant mortality rate was 2.4 infant deaths per 1,000 resident live-births in 2016 and had remained between 1.7 to 2.6 infant deaths in the last decade (Chart 5.3).

Chart 5.3 Infant Mortality Rate

Note: From 1980 onwards, data on infant mortality rate pertain to resident population (i.e. Singapore citizens and permanent residents).

Infant Mortality Rate

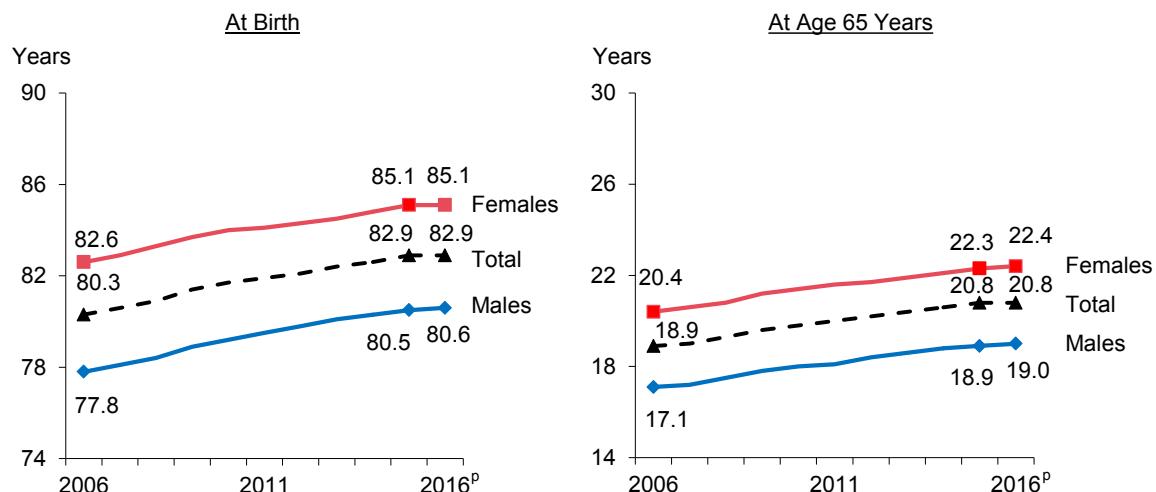

The rate refers to the number of deaths of children under one year of age per thousand live-births. Along with life expectancy, it is one of the most widely used indicators of the population's health status.

Life Expectancy

Life expectancy at birth of resident males continued to rise. In 2016, a new-born boy could expect to live to 80.6 years, higher than the 80.5 years in 2015 and 77.8 years in 2006 (Chart 5.4). Over the same period, the life expectancy at birth of resident females in 2016 remained the same as 2015 at 85.1 years and was higher than the 82.6 years in 2006.

Life expectancy at age 65 years continued to improve to 19.0 years for resident males and 22.4 years for resident females in 2016.

Chart 5.4 Life Expectancy of Resident Population

Life Expectancy

It refers to the average number of additional years which a person at a specific age (such as at birth or age 65 years) could expect to live, if he or she were to experience the age-specific mortality rates of the reference period throughout his/her life. It does not take into account future changes in mortality. The life expectancy gives an indication of the average longevity of the population, but does not necessarily reflect the longevity of an individual.

This single indicator is commonly used to sum up the mortality experience of a population, taking into account the population's age and sex structure.

More details on life expectancy are available in the publication "Complete Life Tables 2015 – 2016 for Singapore Resident Population".

2016	5,607,283	3,933,559	1.3	0.8	7,797	963	40.0
2017	5,612,253	3,965,796	0.1	0.8	7,796	961	40.5

Note: Data on population from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.

¹ Census of Population

² For 1871-1980 and 1990, data refer to annualised growth rates over the previous Census year.

³ Prior to 2003, data are based on Singapore's land area as at end-December. From 2003 onwards, data are based on Singapore's land area as at end-June.

⁴ From 1970 onwards, data refer to resident population.

⁵ Growth rate is computed using population estimates based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period).

⁶ Based on 2003 unrevised population.

Table A1.2 Old-Age Support Ratio and Age Dependency Ratio, 1947 – 2017

Year	Old-Age Support Ratio ³		Age Dependency Ratio ³			Age Dependency Ratio ³		
	Persons Aged 15-64 Years	Persons Aged 20-64 Years	Persons Aged Under 15 Years and 65 Years & Over	Persons Aged Under 15 Years	Persons Aged 65 Years & Over	Persons Aged Under 20 Years and 65 Years & Over	Persons Aged Under 20 Years	Persons Aged 65 Years & Over

Note: Data refer to civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. Civil marriages which were contracted overseas or under religious and customary rites, and were subsequently registered in Singapore in the reference year are excluded.

¹ Total in 2008 includes marriages where the previous marital status of grooms was not reported.

² Data for 1980 are based on total marriages. Data from 1985 onwards are based on resident marriages (where either or both the groom and bride are residents).

³ Data for 1980 are based on total grooms/brides and total population. Data from 1985 onwards are based on resident grooms/brides and resident population (i.e. Singapore citizens and permanent residents).

¹ Refers to births with at least one parent who is a Singapore citizen or permanent resident. Data for 1980 and 1985 are estimated.

² Refers to the number of daughters a woman would have if she were to experience the age-specific fertility rates prevailing during the reference period, assuming that she survives to the end of her child-bearing years.

³ Refers to the number of daughters a woman would have if she were to experience the age-specific fertility and mortality rates prevailing during the reference period.

¹ The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

² Prior to 1990, data refer to total population.

³ Refers to the number of deaths of persons under 28 days of age per thousand live-births.

⁴ Refers to the number of still-births and deaths of persons under 7 days of age per thousand live-births and still-births.

⁵ Refers to the number of maternal deaths (i.e. deaths of mothers) per hundred thousand live-births and still-births.

⁶ Refers to the probability of a new-born baby in a specified reference period dying before reaching the age of 5, if subject to age-specific mortality rates of that reference period. This indicator is derived from a life table and expressed as the number of deaths per thousand live-births.

SINGAPORE DEPARTMENT OF STATISTICS INFORMATION DISSEMINATION SERVICES

Statistics Singapore Website

The *Statistics Singapore Website* was launched by the Singapore Department of Statistics (DOS) in January 1995.

Internet users can access the website by connecting to <http://www.singstat.gov.sg/>

Key Singapore statistics are available via the following sections:

- ❖ **Statistics**
which provides access to the latest statistical findings of DOS as well as statistics compiled by Research and Statistics Units (RSUs) in ministries and statutory boards.
- ❖ **News**
which provides a listing of the news released by DOS and RSUs.
- ❖ **Publications**
which presents the latest editions of DOS' publications, papers and articles.
- ❖ **Browse by Themes**
which presents official statistics compiled by DOS and RSUs in the various ministries and statutory boards according to themes. Within each theme, relevant statistics and related press releases, publications and references are provided.

Statistical resources are available via:

- ❖ **Publication and Papers**
which lists the latest editions of publications released by DOS according to statistical domains at <http://www.singstat.gov.sg/publications/publications-and-papers>.
All softcopy DOS publications are available for free downloading. Statistical tables of DOS publications in Excel format are also available.
- ❖ **Advance Release Calendar**
which provides a six months ahead advance release calendar of key statistical indicators.

The website also provides a convenient gateway to international statistical websites under the "Methodologies & Standards" section:

- ❖ **Guide to International Statistics**
which provides hyperlinks to international databases and classifications, as well as websites of international bodies and other national statistical offices.
- ❖ **IMF Dissemination Standards Bulletin Board**
which provides metadata about Singapore's key indicators in the real, fiscal, financial and external sectors, including dissemination practices and information about pre-release access of current indicators.

SingStat Express

SingStat Express is a personalised data delivery service which sends the latest press releases, notices of publication, newsletter, occasional and information papers to subscribers via email. SMS alert service is also available to local users. Subscription details are available from the *Statistics Singapore Website* (<http://www.singstat.gov.sg/express>).

SINGAPORE DEPARTMENT OF STATISTICS INFORMATION DISSEMINATION SERVICES (*cont'd*)

Really Simple Syndication

Really Simple Syndication (RSS) is an easy way to stay updated on the latest statistical news released via the *Statistics Singapore Website*. The SingStat RSS feed delivers statistical news highlights and hyperlinks to the source documents whenever the updates are posted. More information is available at [http://www.singstat.gov.sg/services/really-simple-syndication-\(rss\).](http://www.singstat.gov.sg/services/really-simple-syndication-(rss).)

SingStat Mobile App

SingStat Mobile App provides users with ready access to the latest key Singapore official statistics through their mobile devices while on the go. Users may visualise data for the latest periods with some 200 charts of commonly used statistics from 25 data categories. The app is available for downloading in iOS and Android devices. More information is available at <http://www.singstat.gov.sg/services/singstat-mobile-app.>

SingStat Table Builder

The *SingStat Table Builder* contains statistical data series on the Singapore economy and population for users to create customised data tables, plot graphs and charts and export them in different file formats. Explore data trends with the e-service at <http://www.singstat.gov.sg/tablebuilder.>

E-survey

The *E-survey* enables business organisations to complete and submit their survey forms through the internet. Using secured encryption protocols, the *E-survey* ensures that the information transmitted through the net is secured and protected. The system features online helps and validation checks to assist respondents in completing their survey forms. With the *E-survey*, respondents do away with the tedious paper work and manual tasks of mailing or faxing their survey returns to the Department.

Statistical Enquiries and Feedback

If you have any statistical enquiries or comment or suggestions on our statistical publications and electronic services, you are welcomed to:

Email us info@singstat.gov.sg

Fax to us **(65) 6332-7689**

Call us **1800-3238118* (local callers)**
(65) 6332-7738 (overseas callers)

* Calls from mobile telephone lines to 1800 local toll free number may be subject to mobile airtime charges as imposed by the relevant mobile service provider.
